Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Shipments, Inventories and Orders Section,
Industry Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 951-9832) or to the Statistics Canada reference centre in:

St. John's	(772-4073)	Winnipeg	(983-4020)
Halifax	(426-5331)	Regina	(780-5405)
Montréal	(283-5725)	Edmonton	(420-3027)

Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section des livraisons, des stocks et des commandes,
Division des industries,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 951-9832) ou au centre de consultation de Statistique Canada à:

St. John's	(772-4073)	Winnipeg	(983-4020)

July 1987

Shipments and new orders for all Canadian manufacturing industries rose significantly in July, posting record highs. These results are in accord with the dramatic upswing in optimism shown by Canadian manufacturers responding to the July 1987 Business Conditions Survey.

HIGHLIGHTS

- Preliminary estimates indicate that the seasonally adjusted value of **shipments** advanced 1.8% in July to a level of $21,676 million. The strength of this increase, in addition to modest increases in the preceding three months, produced a value that surpassed the previous high recorded in February 1987. In July, 16 of the 22 major groups reported higher shipments. Most increases were concentrated in the non-durable goods industries, up 3.1% to $11,444 million. Shipments of durable goods industries were also up, 0.4% to $10,232 million.

- Seasonally adjusted, **inventories owned** by manufacturers increased 1.0% to $33,911 million in July. This was the third increase in the last four months and contrasts with the gently declining trend experienced during 1986. Total inventories held were up 0.8% to $35,508 million for the month of July. Increases of 1.5% in raw materials, 0.5% in finished products and 0.1% in goods in process accounted for the raise.

- The **ratio of** seasonally adjusted total **inventory owned to** seasonally adjusted **shipments** declined from 1.58:1 in June to 1.56:1 in July. This ratio has remained at about the same level since the beginning of the year and is slightly lower than the average for 1986. The ratio of finished goods inventory to shipments went from 0.56:1 to 0.55:1.

- Following a pattern similar to shipments, **new orders** also rose significantly, to a record high of $22,028 million in July. In the durable goods industries, new orders with an estimated value of $10,654 million were 3.0% higher than the June value. Increases of $201 million (+ 18.3%) in electrical and electronic products industries and $171 million (+ 11.5%) in primary metal industries accounted for most of the gain. In the non-durable goods industries, new orders were valued at $11,374 million, up 1.5%.

- The seasonally adjusted **unfilled orders backlog** increased for the fourth month in a row with a 1.4% rise in July to $24,662 million. Unfilled orders have recovered to the level of the April 1986 peak. Unfilled orders increased 1.9% in the durable goods industries to $22,083 million. In the non-durable goods industries, however, unfilled orders were down 2.6% to $2,579 million.

Juillet 1987

Les livraisons et les nouvelles commandes des industries manufacturières canadiennes se sont accrues significativement en juillet, affichant des valeurs jamais atteintes auparavant. Ces résultats concordent avec le revirement dramatique à la hausse montré par les manufacturiers canadiens répondant à l'Enquête sur les perspectives du monde des affaires de juillet 1987.

POINTS SAILLANTS

- Des estimations préliminaires indiquent que la valeur désaisonnalisée des **livraisons** a progressé de 1.8% en juillet pour atteindre un niveau de $21,676 millions. La vigueur de cette augmentation, avec l'addition des modestes augmentations des trois mois précédents, a produit une valeur qui surpasse le niveau élevé enregistré en février 1987. En juillet, 16 des 22 groupes majeurs ont montré des livraisons plus élevées. Les hausses étaient concentrées dans les industries des biens non durables, une augmentation de 3.1% à $11,444 millions. Une augmentation de 0.4% a été également enregistrée pour les livraisons des biens durables qui sont passées à $10,232 millions.

- La valeur désaisonnalisée des **stocks possédés** par les manufacturiers a augmenté de 1.0% à $33,911 millions en juillet. C'était la troisième augmentation dans les quatre derniers mois, contrastant avec la faible tendance à la baisse enregistrée en 1986. Les stocks détenus ont augmenté de 0.8% à $35,508 millions pour le mois de juillet. Des hausses au chapitre des matières premières (+ 1.5%), des produits finis (+ 0.5%) et des produits en cours de transformation (+ 0.1%) ont contribué à ce gain.

- Le **rapport** du total des **stocks possédés** désaisonnalisés **aux livraisons** désaisonnalisées est passé de 1.58:1 en juin à 1.56:1 en juillet. Ce ratio est demeuré à peu près au même niveau depuis le début de l'année et est légèrement inférieur à la moyenne de 1986. Le rapport du total des stocks de produits finis aux livraisons est passé de 0.56:1 à 0.55:1.

- Les **nouvelles commandes** ont suivi une tendance similaire à celle des livraisons et ont également augmenté significativement pour atteindre un niveau record de $22,028 millions en juillet. Dans les industries des biens durables, la valeur estimative de $10,654 millions était supérieure de 3.0% à la valeur de juin. Cette augmentation est principalement attribuable à des gains de $201 millions (+ 18.3%) dans les industries des produits électriques et électroniques; et de $171 millions (+ 11.5%) dans les industries de première transformation des métaux. Les nouvelles commandes de biens non durables ont atteint $11,374 millions, soit une hausse de 1.5% par rapport à la valeur de juin.

- La valeur désaisonnalisée des **commandes en carnet** a augmenté pour un quatrième mois consécutif pour atteindre $24,662 millions, en hausse de 1.4% en juillet. Les commandes en carnet sont revenus au niveau du sommet d'avril 1986. Les commandes en carnet des biens durables ont augmenté de 1.9% à $22,083 millions alors que celles des biens non durables ont diminué de 2.6% à $2,579 millions.

- Not adjusted for seasonal variation, manufacturers' shipments in July 1987 were estimated at $20,542 million, 4.6% higher than the July 1986 level. Cumulative shipments for the first seven months of 1987 have been estimated at $148,917 million, 1.9% higher than the value for the corresponding period in 1986.

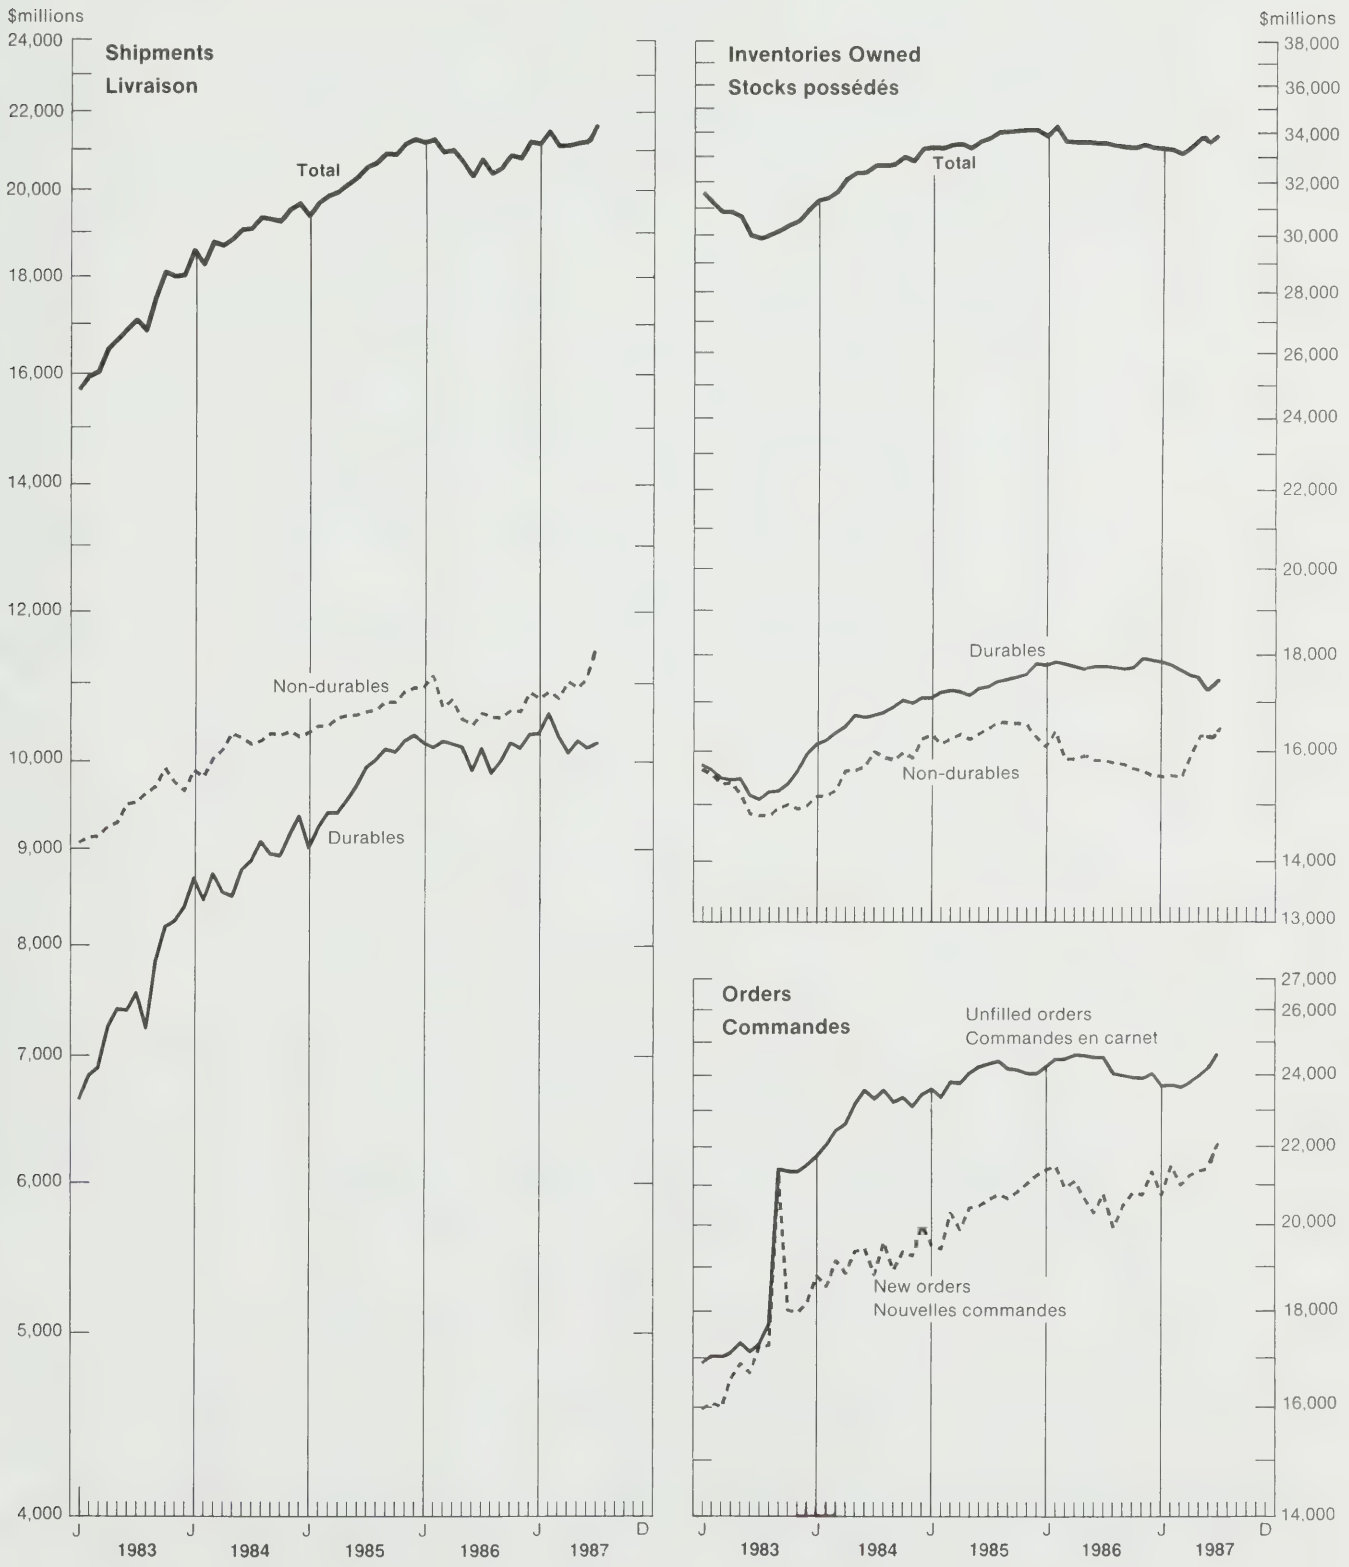

- On a estimé à $20,542 millions les livraisons non désaisonnalisées des manufacturiers en juillet 1987, ce qui représente une augmentation de 4.6% par rapport au niveau de juillet 1986. Pour les sept premiers mois de 1987, les livraisons estimatives ont totalisées $148,917 millions, soit une hausse de 1.9% par rapport à la période correspondante en 1986.

FOOTNOTES

Tables 1 and 5

(1) Although separate series for the Yukon and the Northwest Territories are not published, their values are included in the Canada total.
(2) The value for total shipments contains four industries where "production" is used instead of shipments. Please see concepts and methods, 4th paragraph for more details.

Tables 2 to 4

(1) Series which contain no significant seasonality, include: raw materials in the rubber products industries, primary textiles industries and refined petroleum and coal products industries; and also goods in process for tabacco products industries. Therefore, these series are repeated without adjustment in the tables of seasonally adjusted estimates and aggregates of which they are components. Small differences in the unadjusted values, when repeated, may result from rounding techniques.

Table 6

(1) For this industry, "production" is used instead of shipments. For explanation, please see concepts and methods, 4th paragraph.
(2) The Data for industry 3711 Industrial Inorganic Chemical Industries n.e.c. no longer includes the data for industry 3721 Chemical Fertilizer and Fertilizer Materials Industries.

Note: Figures may not add due to rounding.

NOTES

Tableaux 1 et 5

(1) Même si les séries pour le Yukon et les Territoires du Nord-Ouest ne sont pas publiées elles sont cependant inclues dans le total pour le Canada.
(2) La valeur des livraisons totales contient quatre industries ou la "production" est utilisée au lieu des livraisons. Pour plus de détails, voir le 4ième paragraphe des concepts et méthodes.

Tableaux 2 à 4

(1) Les séries qui sont peu sensibles aux variations saisonnières incluent: les matières premières dans les industries des produits de caoutchouc, des textiles de première transformation et des produits raffinés du pétrole et du charbon; et également les produits en cours dans les industries du tabac. Le tableau de la série désaisonnalisée répète donc les valeurs non corrigées. Les différences minimes entre les séries sont attribuables à la technique d'arrondissement utilisée.

Tableau 6

(1) Pour cette industrie, la "production" est utilisée au lieu des livraisons. Pour plus de détails, voir le 4ième paragraphe des concepts et méthodes.
(2) Les données pour l'industrie 3711 industries des produits chimiques inorganiques d'usage industriel, n.c.a. ne comprennent plus les données de l'industrie 3721 industries des engrais chimiques et de matières pour engrais.

Nota: Les chiffres ne totaliseront peut-être pas en raison de l'arrondissement.

CONCEPTS AND METHODS

Estimation Method

Inventories, shipments and orders values in this publication constitute monthly projections of annual census of manufactures values based on returns from a stratified, systematic sample of manufacturing establishments. The data in the January 1985 publication are the first to be published under the 1980 Standard Industrial Classification (SIC). The data in this publication are benchmarked to the 1983 Census. Values for years prior to 1983 have been previously benchmarked to the corresponding census data and the aggregate of monthly shipments in those years should correspond with published census values. Because the monthly estimates subsequent to 1983 are projections, these totals are subject to adjustment when more recent census data become available. Inventory estimates for December published here, differ from year-end census values to the extent that census totals include individual establishment reports for fiscal years that may end on dates other than December 31. Unfilled orders are published for industries where maintenance of a continuing record of the value of an establishment's backlog of orders is a normal part of the accounting procedure.

The population of manufacturing establishments is divided into groups of large, medium and small establishments according to the value of shipments reported for the census year. Monthly values are sought for all large establishments and a sample is chosen separately for each of the other two size groups. Sample unit values are weighted according to the inverse of their probability of selection. This sample is revised annually in accordance with the census base. To facilitate timely response from company accounting departments, combined reports are accepted from companies with more than one establishment. Estimates of current values are accepted from establishments where the inventory and unfilled orders levels are not measured at the end of each accounting period. There are about 12,500 establishments in the reporting panel.

Inventories

Isolation of component values of inventory by level of fabrication in each industry, where possible, is important for economic studies as well as for derivation of production values. To facilitate this, respondents are asked to report their book values of raw materials, goods in process, finished products and progress payments separately. The inventory levels are calculated on a Canada-wide basis, not by province.

Both inventory held and inventory owned are published. The difference between inventory held and inventory owned is the value of progress payments received by manufacturers for partially completed items such as aircraft, railroad rolling stocks, ships and structures using fabricated steel. As work proceeds on such items, total inventory values increase until the time of delivery. By deducting the balance of progress payments on manufacturers' books from total inventory, the value of manufacturers' investment in inventory is derived.

CONCEPTS ET MÉTHODES

Méthode d'estimation

Les chiffres sur les stocks, les livraisons et les commandes qui figurent dans cette publication sont des projections mensuelles des résultats du recensement annuel des manufactures établies à partir des déclarations d'un échantillon stratifié et systématique d'établissements manufacturiers. Les données que contient la publication de janvier 1985 sont les premières qui soient publiées sous la Classification Type des Industries (C.T.I.) de 1980. Les données que contient la publication sont ajustées en fonction du recensement de 1983. Les chiffres pour les années jusqu'à 1983 inclusivement ont été raccordés aux recensements en cause et la somme des livraisons mensuelles de ces années doit être égale aux résultats de recensements qui ont été publiés. Comme les estimations mensuelles postérieures à 1983 sont des projections, elles pourront être rectifiées lorsqu'on disposera des données de recensement plus récentes. Les estimations sur les stocks publiées dans ce bulletin sont celles de décembre, elles diffèrent donc des chiffres du recensement se rapportant à la fin de l'année dans la mesure où les totaux du recensement comprennent les déclarations de certains établissements pour des années financières qui peuvent prendre fin à d'autres dates qu'au 31 décembre. Les commandes en carnet sont publiées pour les industries où la comptabilité normale prévoit de consigner la valeur des commandes en souffrance des établissements d'une manière suivie.

La population des établissements manufacturiers se divise en trois groupes d'établissements (grands, moyens et petits) suivant la valeur des livraisons déclarées pour l'année de recensement. On demande des déclarations mensuelles à tous les grands établissements et on tire un échantillon séparé pour chacun des deux autres groupes. Les valeurs de l'échantillon sont pondérées en relation inverse de la probabilité qu'elles soient choisies. Cette échantillon est revisé annuellement suivant les résultats du recensement. Dans le but d'aider les services de comptabilité des sociétés à envoyer leurs déclarations à temps. Statistique Canada accepte une déclaration globale pour les sociétés ayant plus d'un établissement et une estimation des chiffres courants pour les établissements dont les stocks et les commandes en carnet ne sont pas recensés à la fin de chaque exercise comptable. On compte environ 12,500 établissements dans l'échantillon.

Les stocks

Il est important d'isoler les chiffres des éléments des stocks selon le stage de fabrication dans chaque industrie, lorsque c'est possible, afin de faire des études économiques et des extrapolations des chiffres de production. Â cet effet, on demande aux enquêtés de déclarer séparément la valeur comptable de leurs matières premières, de leurs produits en cours, de leurs produits finis et de leurs acomptes à valoir. Les niveaux des stocks sont calculés pour l'ensemble du Canada et non au niveau provincial.

On publie la valeur des stocks détenus et des stocks possédés. La différence entre les deux donne la valeur des acomptes versés par les fabricants sur des produits dont la fabrication n'est qu'en partie achevée comme les avions, le matériel ferroviaire roulant, les bâteaux et des constructions qui utilisent des semi-produits en acier. Â mesure que la fabrication de ces produits avance, la valeur globale des stocks augmente jusqu'au moment de la livraison. En déduisant le solde des acomptes comptabilisés par les fabricants de l'ensemble des stocks, on obtient la somme investie dans les stocks par les fabricants.

In order to reduce the distortion in the shipments of the four above mentioned industries that would be caused when responding companies finally treat such items of relatively high value as completed sales, a "production" value is used instead of shipments. This production value is derived from adjusting monthly shipments by the monthly change in inventories held (Goods in process held + Finished products). The raw materials are not included in the calculation since production tries to measure "work done" during the month.

Orders

Most establishments that maintain order books strike a value of unfilled orders at the end of each accounting period. The survey seeks this value which is defined as orders received but not shipped or treated as a sale whether or not work has been done on them or they can be filled from existing stocks. No estimate of this value is made for those industries where orders are customarily filled from stocks on hand and order books are, accordingly, not generally maintained.

New orders, a series of considerable economic interest, is a residual value derived from shipments and unfilled orders. All shipments within any month result from an order received either during that month or at some earlier time. New orders are calculated as the sum of total shipments within any month plus the change in the total of unfilled orders from the end of the previous month to the end of the month under review.

Imputation

Values must be imputed for those establishments that have not reported in time for compilation of monthly estimates. This is largely done by mechanical methods which take into account the activity of similar establishments from which reports have been received. In conjunction with preliminary estimates for the current month, the estimates for the preceeding month are revised to account for any late returns. When respondents report values for periods earlier than those of the revised current estimates, the responses are used to correct the trends when the series are updated to new census benchmarks.

Revisions

Definitions, classifications and groupings are based on those used by the census of manufactures.

The January 1973 issue of this publication contains a more detailed description of the concepts and survey methods for these series.

Historical Series

Major series published in this issue are stored in CANSIM, the computerized time series data bank of Statis-

Afin de réduire la distortion qui surviendrait dans les quatre industries en cause au moment où les sociétés observées considèrent en fin de compte des produits d'une valeur relativement grande comme des ventes achevées, une valeur de "production" est utilisée au lieu des livraisons. Pour arriver à cette valeur de production, il s'agit d'ajuster la valeur mensuelle des livraisons par le changement mensuel dans les inventaires détenus (Produits en cours détenus + Produits finis). Les matières premières ne sont pas incluses dans ce calcul car nous essayons de calculer le "travail fait" durant le mois.

Les commandes

La plupart des établissements qui tiennent des carnets de commandes établissent la valeur des commandes en carnet à la fin de chaque exercice comptable. Lors de l'enquête, nous demandons cette valeur, qui est considérée comme commandes reçues mais non encore expédiées, que des travaux aient été effectués ou non à leur égard, lorsque la commande peut être honorée à partir des stocks existants. Cette valeur n'est pas estimée dans le cas des entreprises qui exécutent habituellement les commandes des réceptions, à partir de leurs stocks et qui, par conséquent, ne tiennent pas de carnet de commande.

Les séries sur les nouvelles commandes, qui présentent beaucoup d'intérêt du point de vue économique, donnent la valeur résiduelle établie à partir des livraisons et des commandes en carnet. Toutes les livraisons effectuées au cours d'un mois donné résultent d'une commande reçue, soit pendant ce mois, soit avant. Les nouvelles commandes sont calculées à partir du total des livraisons au cours d'un mois donné plus la différence entre le total des commandes en carnet à la fin du mois précédent et le total des commandes en carnet à la fin du mois observé.

Imputation

L'imputation des données se fait surtout par des moyens mécaniques qui tiennent compte de l'activité d'établissements semblables qui ont fait parvenir des déclarations. Conformément aux estimations préliminaires pour le mois courant, on révise les estimations pour le mois précédent afin de prendre en compte toutes données déclarées en retard. Lorsque les répondants déclarent les chiffres correspondants aux périodes antérieures à celle des estimations révisées actuelles, les réponses servent à corriger les tendances lorsque les séries sont mises à jour d'après les nouvelles données repéré du recensement.

Révisions

Les définitions, les classifications et les groupes sont basés sur ceux du recensement des manufactures.

Le numéro de janvier 1973 de cette publication contient une description plus détaillée des concepts et des méthodes d'enquête de cette série.

Séries chronologiques

Les séries importantes publiées dans cette livraison sont stockées dans le CANSIM, banque électronique de données sur les

tics Canada. All or any part of these series may be purchased on magnetic tape or as computer print-outs. For further information direct inquiries to:

CANSIM,
Application Consulting Section,
Statistics Canada,
Ottawa, Ontario, K1A 0Z8

Seasonal Adjustment

The seasonal adjustment method applied to the series consists of the ratio-to-moving average method in use at Statistics Canada. The X-11 - ARIMA program is used for seasonal adjustment.

Some series containing no significant seasonality or very high irregularity have not been seasonally adjusted. In these cases, unadjusted values are repeated in the tables of seasonally adjusted data. See footnotes for series affected.

Months for Cyclical Dominance

The MCD or months for cyclical dominance values located at the right of the Cansim databank reference number (e.g. D 315674) for seasonally adjusted series, indicate the smallest span of months for which the average change in the cyclical factor is greater than that for the irregular factor. For the smoothest series the MCD is one; for the most erratic series, it is twelve. Application of a moving average of the period of the MCD will tend to smooth irregular movements that may obscure the underlying trend-cycle.

The Economic Use Classification (EUC)

The concept of the Economic Use Classification (EUC) consists of combining activities of individual industries at the finest level of aggregation identified by the Standard Industrial Classification (SIC) and bring together, in a general sense, industries whose outputs are directed towards the different types of markets served by industry or, in other words, groups that reflect demand on manufacturing industries by elements of the gross national expenditure.

The present EUC consists of six mutually exclusive groups and a supplementary automotive group. Although the output of an industry may serve a market that spans more than one classification, no attempt is made to subdivide that industry's output into finer detail than that identified by the SIC. Thus the distribution of specific industries to economic uses is determined by the perceived market for the greatest share of the industry's output.

séries chronologiques de Statistique Canada. On peut acheter toutes ces séries ou une partie d'entre elles sur bandes magnétiques ou sous forme d'états mécanographiques. Pour tout renseignement complémentaire, s'adresser au:

CANSIM,
Section de consultants aux applications,
Statistique Canada,
Ottawa (Ontario) K1A 0Z8

Désaisonnalisation

On désaisonnalise des séries en calculant le rapport à la moyenne mobile, suivant les méthodes utilisées à Statistique Canada. Il s'agit en l'occurrance du programme normalisé qui sert à appliquer le version X-11 - ARMMI.

Pour quelques séries particulières, il n'y a pas de saisonnalité d'importance, ou il y a trop d'irrégularité. Ces séries n'ont pas été désaisonnalisées. Pour ces cas, les valeurs, sans désaisonnalisation ont été répétées dans les tableaux des séries désaisonnalisées. Voir les notes pour les séries affectées.

Mois de dominance cyclique

Les valeurs de M.D.C. (mois de dominance cyclique) sont situées à la droite du numéro de référence de la Banque de données de "Cansim" (ex: D 315674) pour les séries désaisonnalisées, indiquent le plus petit nombre de mois pour lequel la variation moyenne du facteur cyclique est plus grande que celle du facteur d'irrégularité. Le M.D.C. est de un pour les séries les plus régulières et de douze pour les plus fluctuantes. L'application d'une moyenne mobile de la période des M.D.C. aidera à lisser les mouvements irréguliers qui pourraient masquer la tendance cyclique implicite.

Classification des groupes selon l'utilisation économique (CGUE)

Le concept de la classification des groupes selon l'utilisation économique (CGUE) est de combiner les activités des industries à leur plus bas niveau d'aggrégation identifié par la classification type des industries (C.T.I.) et de rassembler les industries d'après le marché desservi ou encore, en groupe d'après la demande sur les industries manufacturières par les éléments de la dépense nationale brute.

La CGUE comprend six groupes mutuellement exclusifs et une classification complémentaire des industries connexes de l'automobile. Bien que la production d'une industrie peut servir plus d'un marché, aucun effort est fait pour subdiviser la production de cette industrie dans plus de détail que fournit par la C.T.I. Donc, la distribution d'industries spécifiques à un groupe économique se fait entièrement vers le marché qui est perçu comme étant le plus important pour l'industrie en question.

Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Shipments, Inventories and Orders Section,
Industry Division,

Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

August 1987

Canadian manufacturing industry shipments increased for the fifth month in a row in August, but at a slower pace than in July. New orders decreased for the first time since March 1987 with cancellations accounting for a substantial portion of the decline.

HIGHLIGHTS

- Preliminary estimates for August indicate that the seasonally adjusted value of **shipments** advanced 0.5%, reaching a value of $21,683 million. This increase marked a continuation of the gains recorded since April 1987, and again produced a record high, surpassing the July level by $105 million. The August rate of increase, however, was much more modest than that recorded in July. In August, 11 of the 22 major groups reported higher shipments. Most increases were concentrated in the durable goods industries, up 2.5% to $10,385 million. Shipments of nondurable goods industries were down 1.3% to $11,298 million.

- Seasonally adjusted, **inventories owned** by manufacturers increased 0.3% to $33,870 million in August. This was the fourth increase in the last five months and reverses the gently declining trend experienced during 1986. Total inventories held were up 0.4% to $35,498 million for the month of August. Increases of 0.9% in finished products, 0.2% in goods in process accounted for the raise, while raw material remained at the same level.

- The **ratio of** seasonally adjusted total **inventory owned to** seasonally adjusted **shipments** remained at 1.56:1 in August. This ratio has remained at about the same level since the beginning of the year, averaging 1.57:1 in 1987 compared to 1.61:1 in 1986. The ratio of finished goods inventory to shipments went from 0.55:1 to 0.56:1.

- **New orders** fell 1.7% to a value of $21,431 million. This was the first decrease since March 1987. In the durable goods industries, new orders with an estimated value of $10,322 million were 1.3% lower than the July value. Decreases of $179 million (-23.2%) in machinery industries (except electrical industries) and $235 million (-14.3%) in chemical and chemical products industries accounted for most of the loss. In the non-durable goods industries, new orders were valued at $11,109 million, down 2.0%.

- The seasonally adjusted **unfilled orders backlog** at $24,271 million, showed a decrease of 1.0% in August, following increases in the last four months. Unfilled orders are now 1.4% below their April 1986 peak. Unfilled orders decreased 0.3% in the durable goods industries to $21,919 million. In the non-durable goods industries, however, unfilled orders were down 7.4% to $2,352 million.

Août 1987

Les livraisons des industries manufacturières canadiennes ont augmenté en août pour un cinquième mois consécutif, mais à un rythme plus lent que celui de juillet. Les nouvelles commandes ont diminué pour la première fois depuis mars 1987. Les annulations ont représenté une portion substantielle de la baisse.

POINTS SAILLANTS

- Des estimations préliminaires pour août indiquent que la valeur désaisonnalisée des **livraisons** s'est accrue de 0.5% pour atteindre une valeur de $21,683 millions. Cette augmentation, plus celles enregistrées depuis avril 1987, a produit un niveau record surpassant de $105 millions la valeur de celui enregistré le mois précédent. Le taux d'augmentation en août est, cependant, beaucoup plus modeste que celui enregistré en juillet. En août, 11 des 22 groupes majeurs ont montré des livraisons plus élevées. Les hausses étaient concentrées dans les industries des biens durables, en hausse de 2.5% à $10,385 millions. Une diminution de 1.3% a été enregistrée pour les livraisons des biens non-durables qui sont passées à $11,298 millions.

- La valeur désaisonnalisée des **stocks possédés** par les manufacturiers a augmenté de 0.3%, se situant à $33,870 millions en août. Ce quatrième gain, en cinq mois, renverse ainsi la faible tendance à la baisse enregistrée en 1986. Les stocks détenus ont augmenté de 0.4% à $35,498 millions pour le mois d'août. Des hausses au chapitre des produits finis (+ 0.9%), des produits en cours de transformation (+ 0.2) ont contribué à ce gain, tandis que les matières premières sont demeurées au-même niveau.

- Le **rapport** du total des **stocks possédés** désaisonnalisés aux livraisons désaisonnalisées est demeuré à 1.56:1 en août. Ce rapport est demeuré à peu près au même niveau depuis le début de l'année, se situant en moyenne à 1.57:1 en 1987 comparé à 1.61:1 en 1986. Le rapport du total des stocks de produits finis aux livraisons est passé de 0.55:1 à 0.56:1.

- Les **nouvelles commandes** ont chuté de 1.7% pour atteindre $21,431 millions. Il s'agit de la première baisse depuis mars 1987. Dans les industries des biens durables, la valeur estimative des nouvelles commandes était inférieure de 1.3% à la valeur de juillet et s'établissait à $10,322 millions. Cette diminution est principalement attribuable à des pertes de $179 millions (-23.2%) dans les industries de la machinerie (sauf électrique); et de $235 millions (-14.3%) dans les industries chimiques. Les nouvelles commandes de biens non-durables ont atteint $11,109 millions, en baisse de 2.0%.

- La valeur désaisonnalisée des **commandes en carnet** a atteint $24,271 millions, en baisse de 1.0% comparativement à juillet, après des augmentations au cours des quatre derniers mois. Les commandes en carnet sont maintenant inférieures de 1.4% au sommet d'avril 1986. Les commandes en carnet des biens durables ont augmenté de 0.3% à $21,919 millions, alors que celles des biens non-durables ont diminué de 7.4% à $2,352 millions.

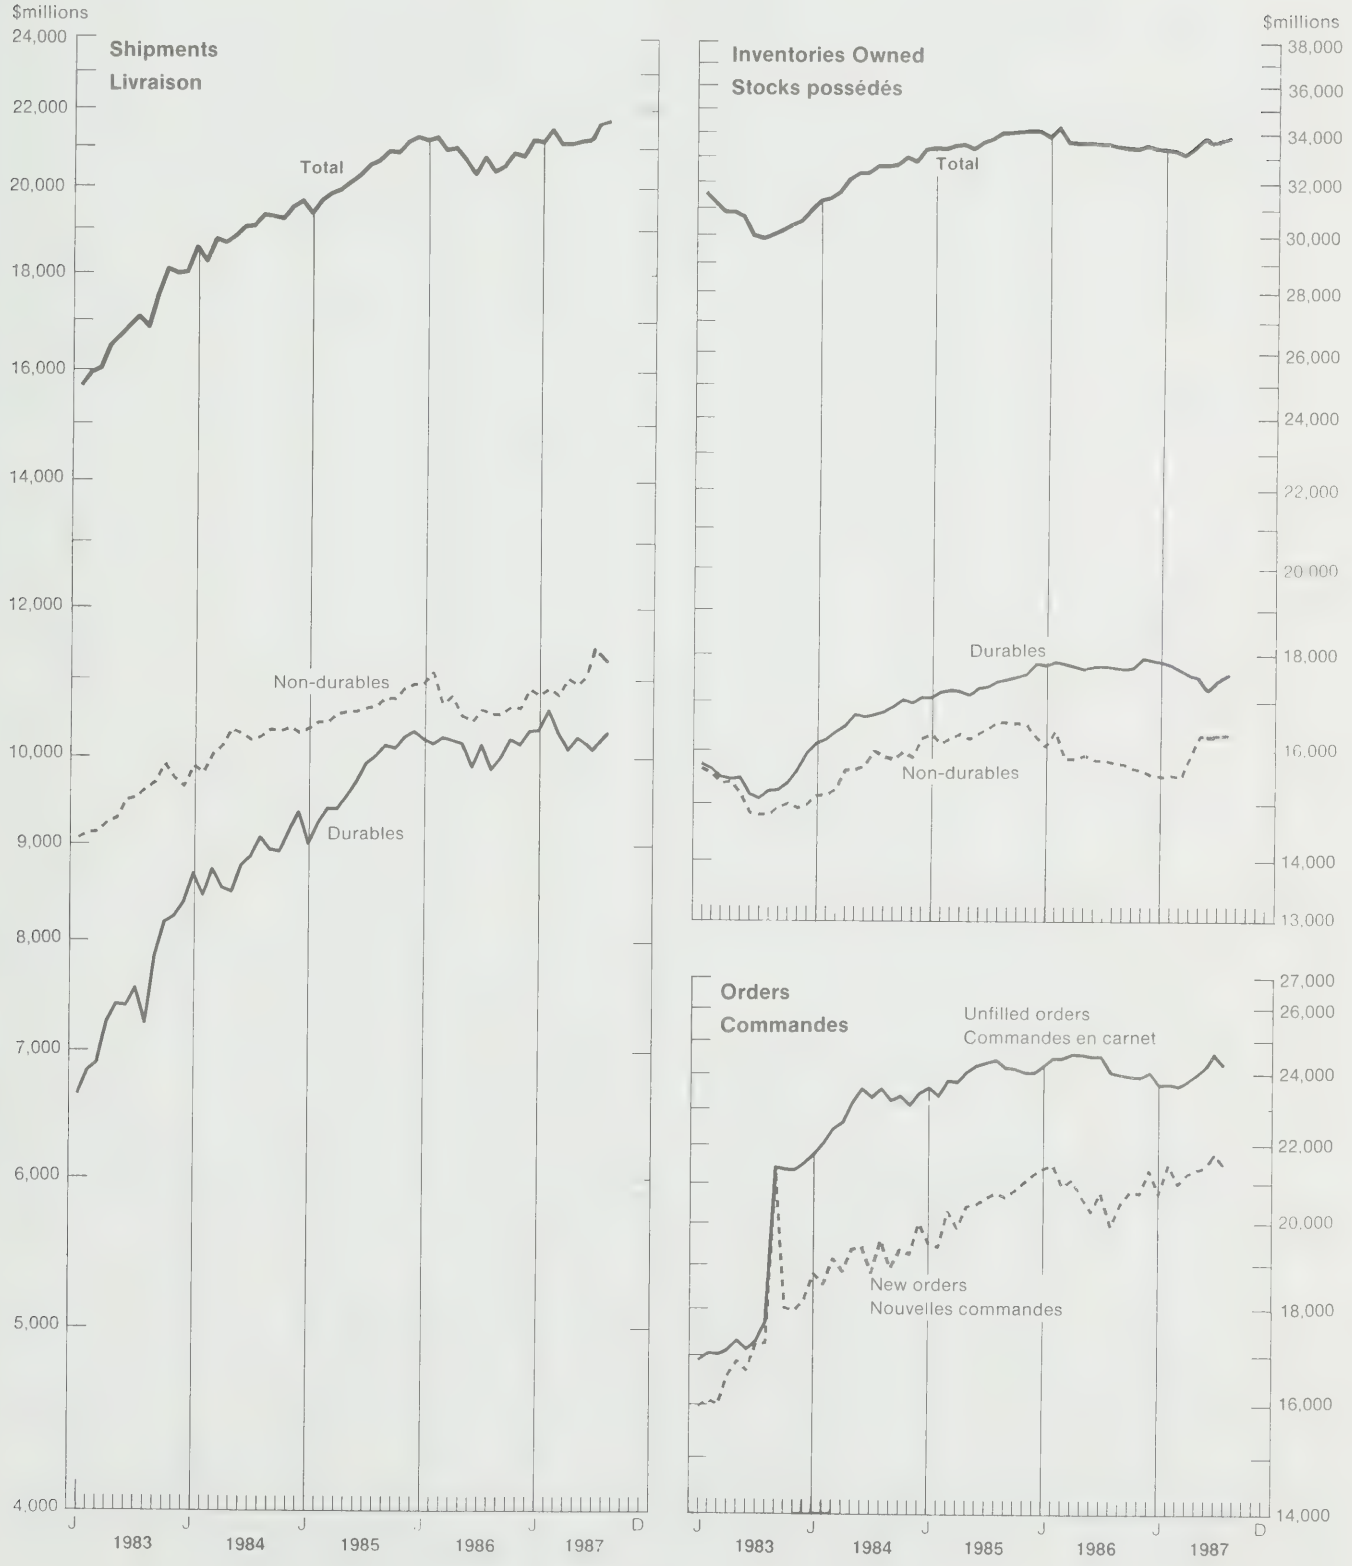

- Not adjusted for seasonal variation, manufacturers' shipments in August 1987 were estimated at $20,826 million, 6.5% higher than the August 1986 level. Cumulative shipments for the first eight months of 1987 have been estimated at $169,658 million, 2.4% higher than the value for the corresponding period in 1986.

- On a estimé à $20,826 millions les livraisons non désaisonnalisées des manufacturiers en août 1987, ce qui représente une augmentation de 6.5% par rapport au niveau d'août 1986. Pour les huit premiers mois de 1987, les livraisons estimatives ont totalisé $169,658 millions, soit un gain de 2.4% par rapport à la période correspondante en 1986.

FOOTNOTES

Tables 1 and 5

(1) Although separate series for the Yukon and the Northwest Territories are not published, their values are included in the Canada total.
(2) The value for total shipments contains four industries where "production" is used instead of shipments. Please see concepts and methods, 4th paragraph for more details.

Tables 2 to 4

(1) Series which contain no significant seasonality, include: raw materials in the rubber products industries, primary textiles industries and refined petroleum and coal products industries; and also goods in process for tabacco products industries. Therefore, these series are repeated without adjustment in the tables of seasonally adjusted estimates and aggregates of which they are components. Small differences in the unadjusted values, when repeated, may result from rounding techniques.

Table 6

(1) For this industry, "production" is used instead of shipments. For explanation, please see concepts and methods, 4th paragraph.
(2) The Data for industry 3711 Industrial Inorganic Chemical Industries n.e.c. no longer includes the data for industry 3721 Chemical Fertilizer and Fertilizer Materials Industries.

Note: Figures may not add due to rounding.

NOTES

Tableaux 1 et 5

(1) Même si les séries pour le Yukon et les Territoires du Nord-Ouest ne sont pas publiées elles sont cependant inclues dans le total pour le Canada.
(2) La valeur des livraisons totales contient quatre industries ou la "production" est utilisée au lieu des livraisons. Pour plus de détails, voir le 4ième paragraphe des concepts et méthodes.

Tableaux 2 à 4

(1) Les séries qui sont peu sensibles aux variations saisonnières incluent: les matières premières dans les industries des produits de caoutchouc, des textiles de première transformation et des produits raffinés du pétrole et du charbon; et également les produits en cours dans les industries du tabac. Le tableau de la série désaisonnalisée répète donc les valeurs non corrigées. Les différences minimes entre les séries sont attribuables à la technique d'arrondissement utilisée.

Tableau 6

(1) Pour cette industrie, la "production" est utilisée au lieu des livraisons. Pour plus de détails, voir le 4ième paragraphe des concepts et méthodes.
(2) Les données pour l'industrie 3711 industries des produits chimiques inorganiques d'usage industriel, n.c.a. ne comprennent plus les données de l'industrie 3721 industries des engrais chimiques et de matières pour engrais.

Nota: Les chiffres ne totaliseront peut-être pas en raison de l'arrondissement.

CONCEPTS AND METHODS

Estimation Method

Inventories, shipments and orders values in this publication constitute monthly projections of annual census of manufactures values based on returns from a stratified, systematic sample of manufacturing establishments. The data in the January 1985 publication are the first to be published under the 1980 Standard Industrial Classification (SIC). The data in this publication are benchmarked to the 1983 Census. Values for years prior to 1983 have been previously benchmarked to the corresponding census data and the aggregate of monthly shipments in those years should correspond with published census values. Because the monthly estimates subsequent to 1983 are projections, these totals are subject to adjustment when more recent census data become available. Inventory estimates for December published here, differ from year-end census values to the extent that census totals include individual establishment reports for fiscal years that may end on dates other than December 31. Unfilled orders are published for industries where maintenance of a continuing record of the value of an establishment's backlog of orders is a normal part of the accounting procedure.

The population of manufacturing establishments is divided into groups of large, medium and small establishments according to the value of shipments reported for the census year. Monthly values are sought for all large establishments and a sample is chosen separately for each of the other two size groups. Sample unit values are weighted according to the inverse of their probability of selection. This sample is revised annually in accordance with the census base. To facilitate timely response from company accounting departments, combined reports are accepted from companies with more than one establishment. Estimates of current values are accepted from establishments where the inventory and unfilled orders levels are not measured at the end of each accounting period. There are about 12,500 establishments in the reporting panel.

Inventories

Isolation of component values of inventory by level of fabrication in each industry, where possible, is important for economic studies as well as for derivation of production values. To facilitate this, respondents are asked to report their book values of raw materials, goods in process, finished products and progress payments separately. The inventory levels are calculated on a Canada-wide basis, not by province.

Both inventory held and inventory owned are published. The difference between inventory held and inventory owned is the value of progress payments received by manufacturers for partially completed items such as aircraft, railroad rolling stocks, ships and structures using fabricated steel. As work proceeds on such items, total inventory values increase until the time of delivery. By deducting the balance of progress payments on manufacturers' books from total inventory, the value of manufacturers' investment in inventory is derived.

CONCEPTS ET MÉTHODES

Méthode d'estimation

Les chiffres sur les stocks, les livraisons et les commandes qui figurent dans cette publication sont des projections mensuelles des résultats du recensement annuel des manufactures établies à partir des déclarations d'un échantillon stratifié et systématique d'établissements manufacturiers. Les données que contient la publication de janvier 1985 sont les premières qui soient publiées sous la Classification Type des Industries (C.T.I.) de 1980. Les données que contient la publication sont ajustées en fonction du recensement de 1983. Les chiffres pour les années jusqu'à 1983 inclusivement ont été raccordés aux recensements en cause et la somme des livraisons mensuelles de ces années doit être égale aux résultats de recensements qui ont été publiés. Comme les estimations mensuelles postérieures à 1983 sont des projections, elles pourront être rectifiées lorsqu'on disposera des données de recensement plus récentes. Les estimations sur les stocks publiées dans ce bulletin sont celles de décembre, elles diffèrent donc des chiffres du recensement se rapportant à la fin de l'année dans la mesure où les totaux du recensement comprennent les déclarations de certains établissements pour des années financières qui peuvent prendre fin à d'autres dates qu'au 31 décembre. Les commandes en carnet sont publiées pour les industries où la comptabilité normale prévoit de consigner la valeur des commandes en souffrance des établissements d'une manière suivie.

La population des établissements manufacturiers se divise en trois groupes d'établissements (grands, moyens et petits) suivant la valeur des livraisons déclarées pour l'année de recensement. On demande des déclarations mensuelles à tous les grands établissements et on tire un échantillon séparé pour chacun des deux autres groupes. Les valeurs de l'échantillon sont pondérées en relation inverse de la probabilité qu'elles soient choisies. Cette échantillon est revisé annuellement suivant les résultats du recensement. Dans le but d'aider les services de comptabilité des sociétés à envoyer leurs déclarations à temps. Statistique Canada accepte une déclaration globale pour les sociétés ayant plus d'un établissement et une estimation des chiffres courants pour les établissements dont les stocks et les commandes en carnet ne sont pas recensés à la fin de chaque exercise comptable. On compte environ 12,500 établissements dans l'échantillon.

Les stocks

Il est important d'isoler les chiffres des éléments des stocks selon le stage de fabrication dans chaque industrie, lorsque c'est possible, afin de faire des études économiques et des extrapolations des chiffres de production. Â cet effet, on demande aux enquêtés de déclarer séparément la valeur comptable de leurs matières premières, de leurs produits en cours, de leurs produits finis et de leurs acomptes à valoir. Les niveaux des stocks sont calculés pour l'ensemble du Canada et non au niveau provincial.

On publie la valeur des stocks détenus et des stocks possédés. La différence entre les deux donne la valeur des acomptes versés par les fabricants sur des produits dont la fabrication n'est qu'en partie achevée comme les avions, le matériel ferroviaire roulant, les bâteaux et des constructions qui utilisent des semi-produits en acier. Â mesure que la fabrication de ces produits avance, la valeur globale des stocks augmente jusqu'au moment de la livraison. En déduisant le solde des acomptes comptabilisés par les fabricants de l'ensemble des stocks, on obtient la somme investie dans les stocks par les fabricants.

In order to reduce the distortion in the shipments of the four above mentioned industries that would be caused when responding companies finally treat such items of relatively high value as completed sales, a "production" value is used instead of shipments. This production value is derived from adjusting monthly shipments by the monthly change in inventories held (Goods in process held + Finished products). The raw materials are not included in the calculation since production tries to measure "work done" during the month.

Orders

Most establishments that maintain order books strike a value of unfilled orders at the end of each accounting period. The survey seeks this value which is defined as orders received but not shipped or treated as a sale whether or not work has been done on them or they can be filled from existing stocks. No estimate of this value is made for those industries where orders are customarily filled from stocks on hand and order books are, accordingly, not generally maintained.

New orders, a series of considerable economic interest, is a residual value derived from shipments and unfilled orders. All shipments within any month result from an order received either during that month or at some earlier time. New orders are calculated as the sum of total shipments within any month plus the change in the total of unfilled orders from the end of the previous month to the end of the month under review.

Imputation

Values must be imputed for those establishments that have not reported in time for compilation of monthly estimates. This is largely done by mechanical methods which take into account the activity of similar establishments from which reports have been received. In conjunction with preliminary estimates for the current month, the estimates for the preceeding month are revised to account for any late returns. When respondents report values for periods earlier than those of the revised current estimates, the responses are used to correct the trends when the series are updated to new census benchmarks.

Revisions

Definitions, classifications and groupings are based on those used by the census of manufactures.

The January 1973 issue of this publication contains a more detailed description of the concepts and survey methods for these series.

Historical Series

Major series published in this issue are stored in CANSIM, the computerized time series data bank of Statis-

Afin de réduire la distortion qui surviendrait dans les quatre industries en cause au moment où les sociétés observées considèrent en fin de compte des produits d'une valeur relativement grande comme des ventes achevées, une valeur de "production" est utilisée au lieu des livraisons. Pour arriver à cette valeur de production, il s'agit d'ajuster la valeur mensuelle des livraisons par le changement mensuel dans les inventaires détenus (Produits en cours détenus + Produits finis). Les matières premières ne sont pas incluses dans ce calcul car nous essayons de calculer le "travail fait" durant le mois.

Les commandes

La plupart des établissements qui tiennent des carnets de commandes établissent la valeur des commandes en carnet à la fin de chaque exercice comptable. Lors de l'enquête, nous demandons cette valeur, qui est considérée comme commandes reçues mais non encore expédiées, que des travaux aient été effectués ou non à leur égard, lorsque la commande peut être honorée à partir des stocks existants. Cette valeur n'est pas estimée dans le cas des entreprises qui exécutent habituellement les commandes des réceptions, à partir de leurs stocks et qui, par conséquent, ne tiennent pas de carnet de commande.

Les séries sur les nouvelles commandes, qui présentent beaucoup d'intérêt du point de vue économique, donnent la valeur résiduelle établie à partir des livraisons et des commandes en carnet. Toutes les livraisons effectuées au cours d'un mois donné résultent d'une commande reçue, soit pendant ce mois, soit avant. Les nouvelles commandes sont calculées à partir du total des livraisons au cours d'un mois donné plus la différence entre le total des commandes en carnet à la fin du mois précédent et le total des commandes en carnet à la fin du mois observé.

Imputation

L'imputation des données se fait surtout par des moyens mécaniques qui tiennent compte de l'activité d'établissements semblables qui ont fait parvenir des déclarations. Conformément aux estimations préliminaires pour le mois courant, on révise les estimations pour le mois précédent afin de prendre en compte toutes données déclarées en retard. Lorsque les répondants déclarent les chiffres correspondants aux périodes antérieures à celle des estimations révisées actuelles, les réponses servent à corriger les tendances lorsque les séries sont mises à jour d'après les nouvelles données repéré du recensement.

Révisions

Les définitions, les classifications et les groupes sont basés sur ceux du recensement des manufactures.

Le numéro de janvier 1973 de cette publication contient une description plus détaillée des concepts et des méthodes d'enquête de cette série.

Séries chronologiques

Les séries importantes publiées dans cette livraison sont stockées dans le CANSIM, banque électronique de données sur les

tics Canada. All or any part of these series may be purchased on magnetic tape or as computer print-outs. For further information direct inquiries to:

CANSIM,
Application Consulting Section,
Statistics Canada,
Ottawa, Ontario, K1A 0Z8

Seasonal Adjustment

The seasonal adjustment method applied to the series consists of the ratio-to-moving average method in use at Statistics Canada. The X-11 - ARIMA program is used for seasonal adjustment.

Some series containing no significant seasonality or very high irregularity have not been seasonally adjusted. In these cases, unadjusted values are repeated in the tables of seasonally adjusted data. See footnotes for series affected.

Months for Cyclical Dominance

The MCD or months for cyclical dominance values located at the right of the Cansim databank reference number (e.g. D 315674) for seasonally adjusted series, indicate the smallest span of months for which the average change in the cyclical factor is greater than that for the irregular factor. For the smoothest series the MCD is one; for the most erratic series, it is twelve. Application of a moving average of the period of the MCD will tend to smooth irregular movements that may obscure the underlying trend-cycle.

The Economic Use Classification (EUC)

The concept of the Economic Use Classification (EUC) consists of combining activities of individual industries at the finest level of aggregation identified by the Standard Industrial Classification (SIC) and bring together, in a general sense, industries whose outputs are directed towards the different types of markets served by industry or, in other words, groups that reflect demand on manufacturing industries by elements of the gross national expenditure.

The present EUC consists of six mutually exclusive groups and a supplementary automotive group. Although the output of an industry may serve a market that spans more than one classification, no attempt is made to subdivide that industry's output into finer detail than that identified by the SIC. Thus the distribution of specific industries to economic uses is determined by the perceived market for the greatest share of the industry's output.

séries chronologiques de Statistique Canada. On peut acheter toutes ces séries ou une partie d'entre elles sur bandes magnétiques ou sous forme d'états mécanographiques. Pour tout renseignement complémentaire, s'adresser au:

Désaisonnalisation

On désaisonnalise des séries en calculant le rapport à la moyenne mobile, suivant les méthodes utilisées à Statistique Canada. Il s'agit en l'occurrance du programme normalisé qui sert à appliquer le version X-11 - ARMMI.

Pour quelques séries particulières, il n'y a pas de saisonnalité d'importance, ou il y a trop d'irrégularité. Ces séries n'ont pas été désaisonnalisées. Pour ces cas, les valeurs, sans désaisonnalisation ont été répétées dans les tableaux des séries désaisonnalisées. Voir les notes pour les séries affectées.

Mois de dominance cyclique

Les valeurs de M.D.C. (mois de dominance cyclique) sont situées à la droite du numéro de référence de la Banque de données de "Cansim" (ex: D 315674) pour les séries désaisonnalisées, indiquent le plus petit nombre de mois pour lequel la variation moyenne du facteur cyclique est plus grande que celle du facteur d'irrégularité. Le M.D.C. est de un pour les séries les plus régulières et de douze pour les plus fluctuantes. L'application d'une moyenne mobile de la période des M.D.C. aidera à lisser les mouvements irréguliers qui pourraient masquer la tendance cyclique implicite.

Classification des groupes selon l'utilisation économique (CGUE)

Le concept de la classification des groupes selon l'utilisation économique (CGUE) est de combiner les activités des industries à leur plus bas niveau d'aggrégation identifié par la classification type des industries (C.T.I.) et de rassembler les industries d'après le marché desservi ou encore, en groupe d'après la demande sur les industries manufacturières par les éléments de la dépense nationale brute.

La CGUE comprend six groupes mutuellement exclusifs et une classification complémentaire des industries connexes de l'automobile. Bien que la production d'une industrie peut servir plus d'un marché, aucun effort est fait pour subdiviser la production de cette industrie dans plus de détail que fournit par la C.T.I. Donc, la distribution d'industries spécifiques à un groupe économique se fait entièrement vers le marché qui est perçu comme étant le plus important pour l'industrie en question.

Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Shipments, Inventories and Orders Section,
Industry Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 951-9832) or to the Statistics Canada reference centre in:

Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous formes diverses. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Concepts et méthodes	71

September 1987

Record highs were posted in September as both shipments and new orders for all Canadian manufacturing industries rose significantly. Shipments increased for the sixth consecutive month while new orders increased for the fifth time in the last six months. As well, the ratio of inventory owned to shipments declined in September even though total inventories owned climbed over the $34 billion mark for the first time since February 1986.

HIGHLIGHTS

- Preliminary estimates indicate that the seasonally adjusted value of **shipments** increased 2.6% in September to a level of $22,282 million. This increase was the largest monthly increase in the past three years and marked a continuation of the gains recorded since April 1987. In September, 11 of the 22 major groups reported higher shipments. Most of the increases were concentrated in the durable goods industries, up 5.1% to $10,925 million while non-durable goods industries showed a slight increase of 0.2% to $11,357 million. Most of the increase in shipments reflected gains for transportation equipment industries (14.2%), wood industries (8.0%) and paper and allied products industries (5.8%).

- Seasonally adjusted, **inventories owned** by manufacturers increased 0.4% to $34,031 million in September. This was the fifth increase in the last six months, and contrasts with the gently declining trend experienced during 1986 and the first quarter of 1987. Total inventories held were up 0.2% to $35,557 million for the month of September. A decrease of 1.1% in finished products was partly offset by increases of 1.2% in raw materials and 0.3% in goods in process.

- The **ratio of** seasonally adjusted total **inventory owned to** seasonally adjusted **shipments** declined from 1.56:1 in August to a new low of 1.53:1 in September. This ratio had remained at about the same level from the beginning of the year until August, averaging 1.57:1 compared to 1.61:1 in 1986. The ratio of finished goods inventory to shipments went from 0.56:1 to 0.54:1.

- Following a pattern similar to shipments, **new orders** rose significantly (3.6%) in September. Except for a decline in August, new orders have increased each month since April 1987, reaching a record value of $22,504 million. In the durable goods industries, new orders with an estimated value of $11,050 million were 6.3% higher than the August value. Increases in electrical and electronic products industries, transportation equipment industries and fabricated metal products industries accounted for most of the gain. In the non-durable goods industries, new orders were valued at $11,454 million, up 1.1%.

Septembre 1987

Les livraisons et les nouvelles commandes ont enregistré des niveaux records en septembre - l'ensemble des industries manufacturières canadiennes ayant augmenté significativement. Les livraisons ont augmenté pour un sixième mois consécutif alors que les nouvelles commandes ont progressé pendant cinq des six derniers mois. Le rapport entre les stocks possédés et les livraisons a diminué bien que les stocks possédés aient dépassé le seuil des $34 milliards pour la première fois depuis février 1986.

FAITS SAILLANTS

- Les estimations préliminaires indiquent que la valeur désaisonnalisée des **livraisons** a augmenté de 2.6% en septembre pour atteindre $22,282 millions. Cette augmentation, qui est la plus forte hausse mensuelle enregistrée lors des trois dernières années, prolonge la série des gains enregistrés depuis avril 1987. En septembre, 11 des 22 groupes majeurs ont montré des livraisons plus élevées. Les hausses étaient concentrées dans les industries des biens durables, en hausse de 5.1% à $10,925 millions tandis que les industries des biens nondurables montraient une légère augmentation de 0.2% à $11,357 millions. La majeure partie de l'augmentation dans les livraisons a eu lieu dans les industries du matériel de transport (14.2%), du bois (8.0%) et du papier et produits connexes (5.8%).

- La valeur désaisonnalisée des **stocks possédés** par les manufacturiers a augmenté de 0.4%, se situant à $34,031 millions en septembre. Il s'agit de la cinquième augmentation en six mois et contraste avec la faible tendance à la baisse enregistrée en 1986 et pendant le premier trimestre de 1987. Les stocks détenus ont augmenté de 0.2% à $35,557 millions pour le mois de septembre. Une baisse a été enregistrée au chapitre des produits finis (- 1.1%) mais des augmentations au chapitre des matières premières (+ 1.2%) et des produits en cours de transformation (+ 0.3%) ont été également enregistrées.

- Le **rapport** entre le total des **stocks possédés** désaisonnalisés aux **livraisons** désaisonnalisées est passé de 1.56:1 en août à 1.53:1 en septembre, son niveau le plus bas. Depuis le début de l'année jusqu'en août, le rapport est demeuré à peu près au même niveau pour se situer en moyenne à 1.57:1 comparativement à 1.61:1 en 1986. Le rapport des produits finis aux livraisons est passé de 0.56:1 à 0.54:1.

- Les **nouvelles commandes** ont suivi une tendance similaire à celle des livraisons et ont également augmenté significativement en septembre (3.6%). À l'exception d'une baisse en août, les nouvelles commandes ont augmenté depuis avril 1987, atteignant un niveau record de $22,504 millions. Dans les industries des biens durables, la valeur estimative des nouvelles commandes était supérieure de 6.3% à la valeur d'août et s'établissait à $11,050 millions. Cette augmentation est principalement attribuable à des gains dans les industries des produits électriques et électroniques, du matériel de transport et de la fabrication des produits métalliques. Les nouvelles commandes de biens non durables ont atteint $11,454 millions, en hausse de 1.1%.

- The seasonally adjusted **unfilled orders backlog** at $24,735 million, increased 0.9% in September. This increase extends the upward trend experienced since April 1987. Unfilled orders have also reached a record high, surpassing the April 1986 peak. In the non-durable goods industries, unfilled orders were up 3.8% to $2,635 million. Unfilled orders increased 0.6% in the durable goods industries to $22,100 million.

- Not adjusted for seasonal variation, manufacturers' shipments in September 1987 were estimated at $23,-212 million, 8.5% higher than the September 1986 level. Cumulative shipments for the first nine months of 1987 have been estimated at $192,915 million, 3.1% higher than the value for the corresponding period in 1986.

- La valeur désaisonnalisée des **commandes en carnet**, à $24,735 millions, a montré une augmentation de 0.9% en septembre. Ce gain prolonge la tendance à la hausse enregistrée depuis avril 1987. Les commandes en carnet ont atteint un niveau record, surpassant ainsi le sommet enregistré en avril 1986. Les commandes en carnet des biens non-durables ont augmenté de 3.8% à $2,635 millions, alors que celles des biens durables ont augmenté de 0.6% à $22,100 millions.

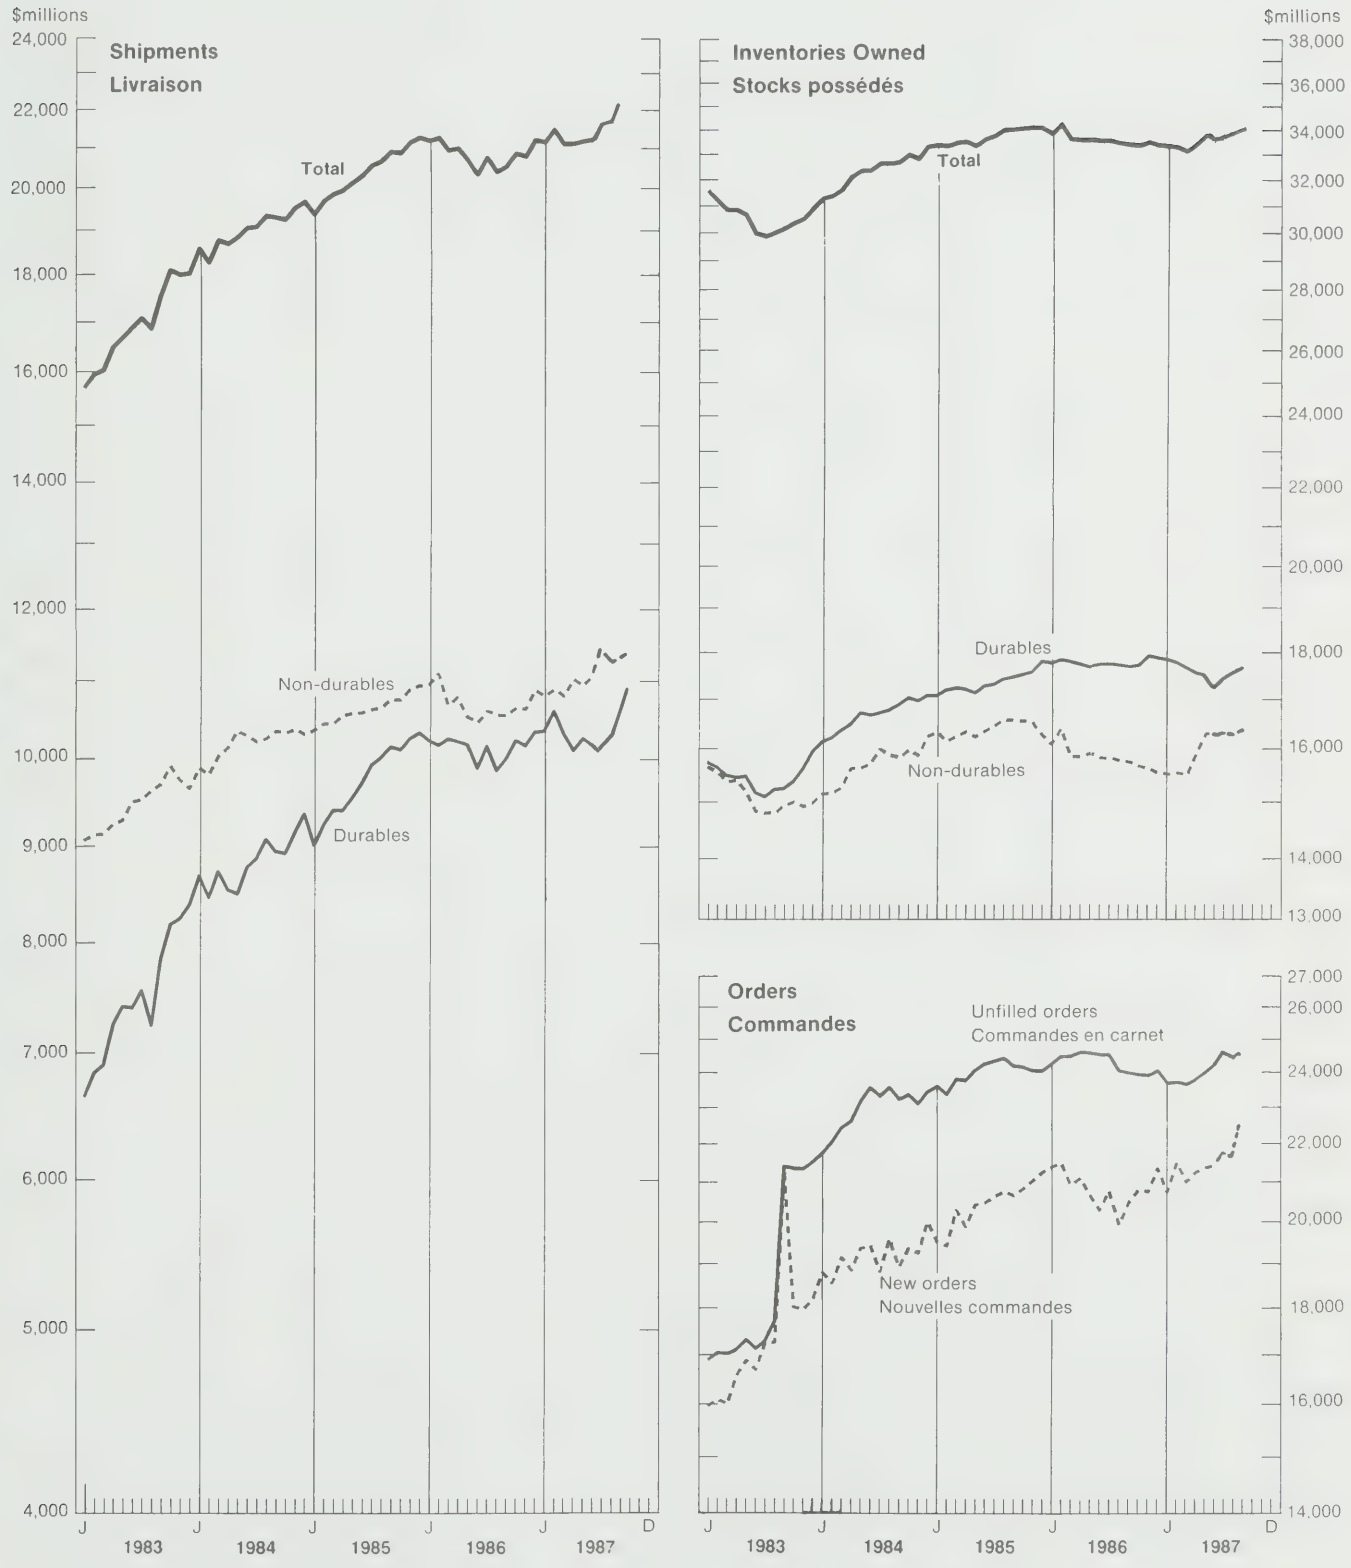

- On a estimé à $23,212 millions les livraisons non désaisonnalisées provenant des manufacturiers en septembre 1987, ce qui représente une augmentation de 8.5% par rapport au niveau de septembre 1986. Pour les neuf premiers mois de 1987, les livraisons estimatives ont totalisé $192,915 millions, soit un gain de 3.1% par rapport à la période correspondante en 1986.

FOOTNOTES

Tables 1 and 5

(1) Although separate series for the Yukon and the Northwest Territories are not published, their values are included in the Canada total.
(2) The value for total shipments contains four industries where "production" is used instead of shipments. Please see concepts and methods, 4th paragraph for more details.

Tables 2 to 4

(1) Series which contain no significant seasonality, include: raw materials in the rubber products industries, primary textiles industries and refined petroleum and coal products industries; and also goods in process for tabacco products industries. Therefore, these series are repeated without adjustment in the tables of seasonally adjusted estimates and aggregates of which they are components. Small differences in the unadjusted values, when repeated, may result from rounding techniques.

Table 6

(1) For this industry, "production" is used instead of shipments. For explanation, please see concepts and methods, 4th paragraph.
(2) The Data for industry 3711 Industrial Inorganic Chemical Industries n.e.c. no longer includes the data for industry 3721 Chemical Fertilizer and Fertilizer Materials Industries.

Note: Figures may not add due to rounding.

NOTES

Tableaux 1 et 5

(1) Même si les séries pour le Yukon et les Territoires du Nord-Ouest ne sont pas publiées elles sont cependant inclues dans le total pour le Canada.
(2) La valeur des livraisons totales contient quatre industries ou la "production" est utilisée au lieu des livraisons. Pour plus de détails, voir le 4ième paragraphe des concepts et méthodes.

Tableaux 2 à 4

(1) Les séries qui sont peu sensibles aux variations saisonnières incluent: les matières premières dans les industries des produits de caoutchouc, des textiles de première transformation et des produits raffinés du pétrole et du charbon; et également les produits en cours dans les industries du tabac. Le tableau de la série désaisonnalisée répète donc les valeurs non corrigées. Les différences minimes entre les séries sont attribuables à la technique d'arrondissement utilisée.

Tableau 6

(1) Pour cette industrie, la "production" est utilisée au lieu des livraisons. Pour plus de détails, voir le 4ième paragraphe des concepts et méthodes.
(2) Les données pour l'industrie 3711 industries des produits chimiques inorganiques d'usage industriel, n.c.a. ne comprennent plus les données de l'industrie 3721 industries des engrais chimiques et de matières pour engrais.

Nota: Les chiffres ne totaliseront peut-être pas en raison de l'arrondissement.

CONCEPTS AND METHODS

Estimation Method

Inventories, shipments and orders values in this publication constitute monthly projections of annual census of manufactures values based on returns from a stratified, systematic sample of manufacturing establishments. The data in the January 1985 publication are the first to be published under the 1980 Standard Industrial Classification (SIC). The data in this publication are benchmarked to the 1983 Census. Values for years prior to 1983 have been previously benchmarked to the corresponding census data and the aggregate of monthly shipments in those years should correspond with published census values. Because the monthly estimates subsequent to 1983 are projections, these totals are subject to adjustment when more recent census data become available. Inventory estimates for December published here, differ from year-end census values to the extent that census totals include individual establishment reports for fiscal years that may end on dates other than December 31. Unfilled orders are published for industries where maintenance of a continuing record of the value of an establishment's backlog of orders is a normal part of the accounting procedure.

The population of manufacturing establishments is divided into groups of large, medium and small establishments according to the value of shipments reported for the census year. Monthly values are sought for all large establishments and a sample is chosen separately for each of the other two size groups. Sample unit values are weighted according to the inverse of their probability of selection. This sample is revised annually in accordance with the census base. To facilitate timely response from company accounting departments, combined reports are accepted from companies with more than one establishment. Estimates of current values are accepted from establishments where the inventory and unfilled orders levels are not measured at the end of each accounting period. There are about 12,500 establishments in the reporting panel.

Inventories

Isolation of component values of inventory by level of fabrication in each industry, where possible, is important for economic studies as well as for derivation of production values. To facilitate this, respondents are asked to report their book values of raw materials, goods in process, finished products and progress payments separately. The inventory levels are calculated on a Canada-wide basis, not by province.

Both inventory held and inventory owned are published. The difference between inventory held and inventory owned is the value of progress payments received by manufacturers for partially completed items such as aircraft, railroad rolling stocks, ships and structures using fabricated steel. As work proceeds on such items, total inventory values increase until the time of delivery. By deducting the balance of progress payments on manufacturers' books from total inventory, the value of manufacturers' investment in inventory is derived.

CONCEPTS ET MÉTHODES

Méthode d'estimation

Les chiffres sur les stocks, les livraisons et les commandes qui figurent dans cette publication sont des projections mensuelles des résultats du recensement annuel des manufactures établies à partir des déclarations d'un échantillon stratifié et systématique d'établissements manufacturiers. Les données que contient la publication de janvier 1985 sont les premières qui soient publiées sous la Classification Type des Industries (C.T.I.) de 1980. Les données que contient la publication sont ajustées en fonction du recensement de 1983. Les chiffres pour les années jusqu'à 1983 inclusivement ont été raccordés aux recensements en cause et la somme des livraisons mensuelles de ces années doit être égale aux résultats de recensements qui ont été publiés. Comme les estimations mensuelles postérieures à 1983 sont des projections, elles pourront être rectifiées lorsqu'on disposera des données de recensement plus récentes. Les estimations sur les stocks publiées dans ce bulletin sont celles de décembre, elles diffèrent donc des chiffres du recensement se rapportant à la fin de l'année dans la mesure où les totaux du recensement comprennent les déclarations de certains établissements pour des années financières qui peuvent prendre fin à d'autres dates qu'au 31 décembre. Les commandes en carnet sont publiées pour les industries où la comptabilité normale prévoit de consigner la valeur des commandes en souffrance des établissements d'une manière suivie.

La population des établissements manufacturiers se divise en trois groupes d'établissements (grands, moyens et petits) suivant la valeur des livraisons déclarées pour l'année de recensement. On demande des déclarations mensuelles à tous les grands établissements et on tire un échantillon séparé pour chacun des deux autres groupes. Les valeurs de l'échantillon sont pondérées en relation inverse de la probabilité qu'elles soient choisies. Cette échantillon est revisé annuellement suivant les résultats du recensement. Dans le but d'aider les services de comptabilité des sociétés à envoyer leurs déclarations à temps. Statistique Canada accepte une déclaration globale pour les sociétés ayant plus d'un établissement et une estimation des chiffres courants pour les établissements dont les stocks et les commandes en carnet ne sont pas recensés à la fin de chaque exercise comptable. On compte environ 12,500 établissements dans l'échantillon.

Les stocks

Il est important d'isoler les chiffres des éléments des stocks selon le stage de fabrication dans chaque industrie, lorsque c'est possible, afin de faire des études économiques et des extrapolations des chiffres de production. Â cet effet, on demande aux enquêtés de déclarer séparément la valeur comptable de leurs matières premières, de leurs produits en cours, de leurs produits finis et de leurs acomptes à valoir. Les niveaux des stocks sont calculés pour l'ensemble du Canada et non au niveau provincial.

On publie la valeur des stocks détenus et des stocks possédés. La différence entre les deux donne la valeur des acomptes versés par les fabricants sur des produits dont la fabrication n'est qu'en partie achevée comme les avions, le matériel ferroviaire roulant, les bâteaux et des constructions qui utilisent des semi-produits en acier. Â mesure que la fabrication de ces produits avance, la valeur globale des stocks augmente jusqu'au moment de la livraison. En déduisant le solde des acomptes comptabilisés par les fabricants de l'ensemble des stocks, on obtient la somme investie dans les stocks par les fabricants.

In order to reduce the distortion in the shipments of the four above mentioned industries that would be caused when responding companies finally treat such items of relatively high value as completed sales, a "production" value is used instead of shipments. This production value is derived from adjusting monthly shipments by the monthly change in inventories held (Goods in process held + Finished products). The raw materials are not included in the calculation since production tries to measure "work done" during the month.

Afin de réduire la distortion qui surviendrait dans les quatre industries en cause au moment où les sociétés observées considèrent en fin de compte des produits d'une valeur relativement grande comme des ventes achevées, une valeur de "production" est utilisée au lieu des livraisons. Pour arriver à cette valeur de production, il s'agit d'ajuster la valeur mensuelle des livraisons par le changement mensuel dans les inventaires détenus (Produits en cours détenus + Produits finis). Les matières premières ne sont pas incluses dans ce calcul car nous essayons de calculer le "travail fait" durant le mois.

Orders

Most establishments that maintain order books strike a value of unfilled orders at the end of each accounting period. The survey seeks this value which is defined as orders received but not shipped or treated as a sale whether or not work has been done on them or they can be filled from existing stocks. No estimate of this value is made for those industries where orders are customarily filled from stocks on hand and order books are, accordingly, not generally maintained.

New orders, a series of considerable economic interest, is a residual value derived from shipments and unfilled orders. All shipments within any month result from an order received either during that month or at some earlier time. New orders are calculated as the sum of total shipments within any month plus the change in the total of unfilled orders from the end of the previous month to the end of the month under review.

Les commandes

La plupart des établissements qui tiennent des carnets de commandes établissent la valeur des commandes en carnet à la fin de chaque exercice comptable. Lors de l'enquête, nous demandons cette valeur, qui est considérée comme commandes reçues mais non encore expédiées, que des travaux aient été effectués ou non à leur égard, lorsque la commande peut être honorée à partir des stocks existants. Cette valeur n'est pas estimée dans le cas des entreprises qui exécutent habituellement les commandes des réceptions, à partir de leurs stocks et qui, par conséquent, ne tiennent pas de carnet de commande.

Les séries sur les nouvelles commandes, qui présentent beaucoup d'intérêt du point de vue économique, donnent la valeur résiduelle établie à partir des livraisons et des commandes en carnet. Toutes les livraisons effectuées au cours d'un mois donné résultent d'une commande reçue, soit pendant ce mois, soit avant. Les nouvelles commandes sont calculées à partir du total des livraisons au cours d'un mois donné plus la différence entre le total des commandes en carnet à la fin du mois précédent et le total des commandes en carnet à la fin du mois observé.

Imputation

Values must be imputed for those establishments that have not reported in time for compilation of monthly estimates. This is largely done by mechanical methods which take into account the activity of similar establishments from which reports have been received. In conjunction with preliminary estimates for the current month, the estimates for the preceeding month are revised to account for any late returns. When respondents report values for periods earlier than those of the revised current estimates, the responses are used to correct the trends when the series are updated to new census benchmarks.

Imputation

L'imputation des données se fait surtout par des moyens mécaniques qui tiennent compte de l'activité d'établissements semblables qui ont fait parvenir des déclarations. Conformément aux estimations préliminaires pour le mois courant, on révise les estimations pour le mois précédent afin de prendre en compte toutes données déclarées en retard. Lorsque les répondants déclarent les chiffres correspondants aux périodes antérieures à celle des estimations révisées actuelles, les réponses servent à corriger les tendances lorsque les séries sont mises à jour d'après les nouvelles données repéré du recensement.

Revisions

Definitions, classifications and groupings are based on those used by the census of manufactures.

The January 1973 issue of this publication contains a more detailed description of the concepts and survey methods for these series.

Révisions

Les définitions, les classifications et les groupes sont basés sur ceux du recensement des manufactures.

Le numéro de janvier 1973 de cette publication contient une description plus détaillée des concepts et des méthodes d'enquête de cette série.

Historical Series

Major series published in this issue are stored in CANSIM, the computerized time series data bank of Statis-

Séries chronologiques

Les séries importantes publiées dans cette livraison sont stockées dans le CANSIM, banque électronique de données sur les

tics Canada. All or any part of these series may be purchased on magnetic tape or as computer print-outs. For further information direct inquiries to:

CANSIM,
Application Consulting Section,
Statistics Canada,
Ottawa, Ontario, K1A 0Z8

Seasonal Adjustment

The seasonal adjustment method applied to the series consists of the ratio-to-moving average method in use at Statistics Canada. The X-11 - ARIMA program is used for seasonal adjustment.

Some series containing no significant seasonality or very high irregularity have not been seasonally adjusted. In these cases, unadjusted values are repeated in the tables of seasonally adjusted data. See footnotes for series affected.

Months for Cyclical Dominance

The MCD or months for cyclical dominance values located at the right of the Cansim databank reference number (e.g. D 315674) for seasonally adjusted series, indicate the smallest span of months for which the average change in the cyclical factor is greater than that for the irregular factor. For the smoothest series the MCD is one; for the most erratic series, it is twelve. Application of a moving average of the period of the MCD will tend to smooth irregular movements that may obscure the underlying trend-cycle.

The Economic Use Classification (EUC)

The concept of the Economic Use Classification (EUC) consists of combining activities of individual industries at the finest level of aggregation identified by the Standard Industrial Classification (SIC) and bring together, in a general sense, industries whose outputs are directed towards the different types of markets served by industry or, in other words, groups that reflect demand on manufacturing industries by elements of the gross national expenditure.

The present EUC consists of six mutually exclusive groups and a supplementary automotive group. Although the output of an industry may serve a market that spans more than one classification, no attempt is made to subdivide that industry's output into finer detail than that identified by the SIC. Thus the distribution of specific industries to economic uses is determined by the perceived market for the greatest share of the industry's output.

séries chronologiques de Statistique Canada. On peut acheter toutes ces séries ou une partie d'entre elles sur bandes magnétiques ou sous forme d'états mécanographiques. Pour tout renseignement complémentaire, s'adresser au:

CANSIM,
Section de consultants aux applications,

Désaisonnalisation

On désaisonnalise des séries en calculant le rapport à la moyenne mobile, suivant les méthodes utilisées à Statistique Canada. Il s'agit en l'occurrance du programme normalisé qui sert à appliquer le version X-11 - ARMMI.

Pour quelques séries particulières, il n'y a pas de saisonnalité d'importance, ou il y a trop d'irrégularité. Ces séries n'ont pas été désaisonnalisées. Pour ces cas, les valeurs, sans désaisonnalisation ont été répétées dans les tableaux des séries désaisonnalisées. Voir les notes pour les séries affectées.

Mois de dominance cyclique

Les valeurs de M.D.C. (mois de dominance cyclique) sont situées à la droite du numéro de référence de la Banque de données de "Cansim" (ex: D 315674) pour les séries désaisonnalisées, indiquent le plus petit nombre de mois pour lequel la variation moyenne du facteur cyclique est plus grande que celle du facteur d'irrégularité. Le M.D.C. est de un pour les séries les plus régulières et de douze pour les plus fluctuantes. L'application d'une moyenne mobile de la période des M.D.C. aidera à lisser les mouvements irréguliers qui pourraient masquer la tendance cyclique implicite.

Classification des groupes selon l'utilisation économique (CGUE)

Le concept de la classification des groupes selon l'utilisation économique (CGUE) est de combiner les activités des industries à leur plus bas niveau d'aggrégation identifié par la classification type des industries (C.T.I.) et de rassembler les industries d'après le marché desservi ou encore, en groupe d'après la demande sur les industries manufacturières par les éléments de la dépense nationale brute.

La CGUE comprend six groupes mutuellement exclusifs et une classification complémentaire des industries connexes de l'automobile. Bien que la production d'une industrie peut servir plus d'un marché, aucun effort est fait pour subdiviser la production de cette industrie dans plus de détail que fournit par la C.T.I. Donc, la distribution d'industries spécifiques à un groupe économique se fait entièrement vers le marché qui est perçu comme étant le plus important pour l'industrie en question.

Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Shipments, Inventories and Orders Section,
Industry Division,

October 1987

While shipments for all Canadian manufacturing industries increased for the seventh consecutive month, both new orders and the backlog of unfilled orders declined in October. The ratio of inventory owned to shipments fell to a new low.

Gains in transportation equipment industries, refined petroleum and coal products industries and primary metal industries accounted for much of the increase in shipments. These increases for manufacturing shipments are in accord with recently published October increases for exports and for new motor vehicle sales.

Highlights

- Preliminary estimates indicate that the seasonally adjusted value of **shipments** increased 1.9% in October to a level of $22,738 million. Continuous gains since April 1987 have pushed shipments to a new record level. In October, 13 of the 22 major groups reported higher shipments. Most of the increases were concentrated in the durable goods industries, up 3.5% to $11,291 million while non-durable goods industries showed a slight increase of 0.3% to $11,448 million.

- Seasonally adjusted, **inventories owned** by manufacturers increased 0.3% to $34,034 million in October. This was the sixth increase in the last seven months. Total inventories held were up 0.3% to $35,545 million for the month of October. A decrease of 1.0% in goods in process was partly offset by increases of 0.9% in finished products and 0.6% in raw materials.

- The **ratio of** seasonally adjusted **total inventory owned to** seasonally adjusted **shipments** fell to a new low of 1.50:1 in October. This ratio has declined despite an increasing trend for inventories owned because of an even stronger upward trend in shipments. The ratio of finished goods inventory to shipments remained at 0.53:1.

- **New orders** declined 0.5% in October following a sharp increase in September. Apart from a small decline in August, new orders had increased an average of almost 1% per month since March 1987. In the durable goods industries, new orders with an estimated value of $10,983 million were 0.5% lower than the September value. In the non-durable goods industries, new orders were valued at $11,529 million, down 0.4%.

- The seasonally adjusted **unfilled orders backlog** at $24,582 million, decreased 0.9% in October. This decrease followed an upward trend experienced since April 1987. In the durable goods industries, unfilled orders were down 1.4% to $21,800 million. Unfilled orders increased 3.0% in the non-durable goods industries to $2,782 million.

Octobre 1987

Bien que les livraisons pour l'ensemble des industries manufacturières canadiennes aient augmenté pour un septième mois consécutif, les nouvelles commandes ainsi que les commandes en carnet ont diminué en octobre. Le rapport des stocks possédés aux livraisons a chuté à son niveau le plus bas.

L'augmentation des livraisons est principalement attribuable à des gains dans les industries du matériel de transport, des produits raffinés du pétrole et du charbon et des industries de première transformation des métaux. Les augmentations des livraisons manufacturières concordent avec les récentes augmentations publiées en octobre pour les exportations et les ventes des véhicules automobiles neufs.

Faits Saillants

- Les estimations préliminaires indiquent que la valeur désaisonnalisée des **livraisons** a augmenté de 1.9% en octobre pour atteindre $22,738 millions. Des gains continus depuis avril 1987 ont amené les livraisons à un nouveau niveau record. En octobre, 13 des 22 groupes majeurs ont montré des livraisons plus élevées. Les hausses étaient concentrées dans les industries des biens durables, en hausse de 3.5% à $11,291 millions, tandis que les industries des biens non durables montraient une légère augmentation de 0.3% à $11,448 millions.

- La valeur désaisonnalisée des **stocks possédés** par les manufacturiers a augmenté de 0.3%, se situant à $34,034 millions en octobre. C'était la sixième augmentation dans les sept derniers mois. Les stocks détenus ont augmenté de 0.3% à $35,545 millions pour le mois d'octobre. Une baisse a été enregistrée au chapitre des produits en cours de transformation (-1.0%) mais des augmentations au chapitre des produits finis (+ 0.9%) et des matières premières (+ 0.6%) ont été également enregistrées.

- Le **rapport** du total des **stocks possédés** désaisonnalisés aux **livraisons** désaisonnalisées a chuté à 1.50:1 en octobre pour atteindre son niveau le plus bas. Ce rapport a diminué malgré une tendance à la hausse pour les stocks possédés, du fait d'une tendance à la hausse plus marquée pour les livraisons. Le rapport des produits finis aux livraisons est demeuré à 0.53:1.

- Les **nouvelles commandes** ont dimimué de 0.5% en octobre après avoir connu une augmentation marquée en septembre. Exceptée une légère baisse en août, les nouvelles commandes avaient augmenté de près de 1% en moyenne mensuellement depuis mars 1987. Dans les industries des biens durables, la valeur estimative des nouvelles commandes était inférieure de 0.5% à la valeur de septembre et s'établissait à $10,983 millions. Les nouvelles commandes de biens non durables ont atteint $11,529 millions, en baisse de 0.4%.

- La valeur désaisonnalisée des **commandes en carnet**, à $24,582 millions, a montré une diminution de 0.9% en octobre. Cette diminution fait suite à une tendance à la hausse depuis avril 1987. Les commandes en carnet des biens durables ont diminué de 1.4% à $21,800 millions alors que celles des biens non durables ont augmenté de 3.0% à $2,782 millions.

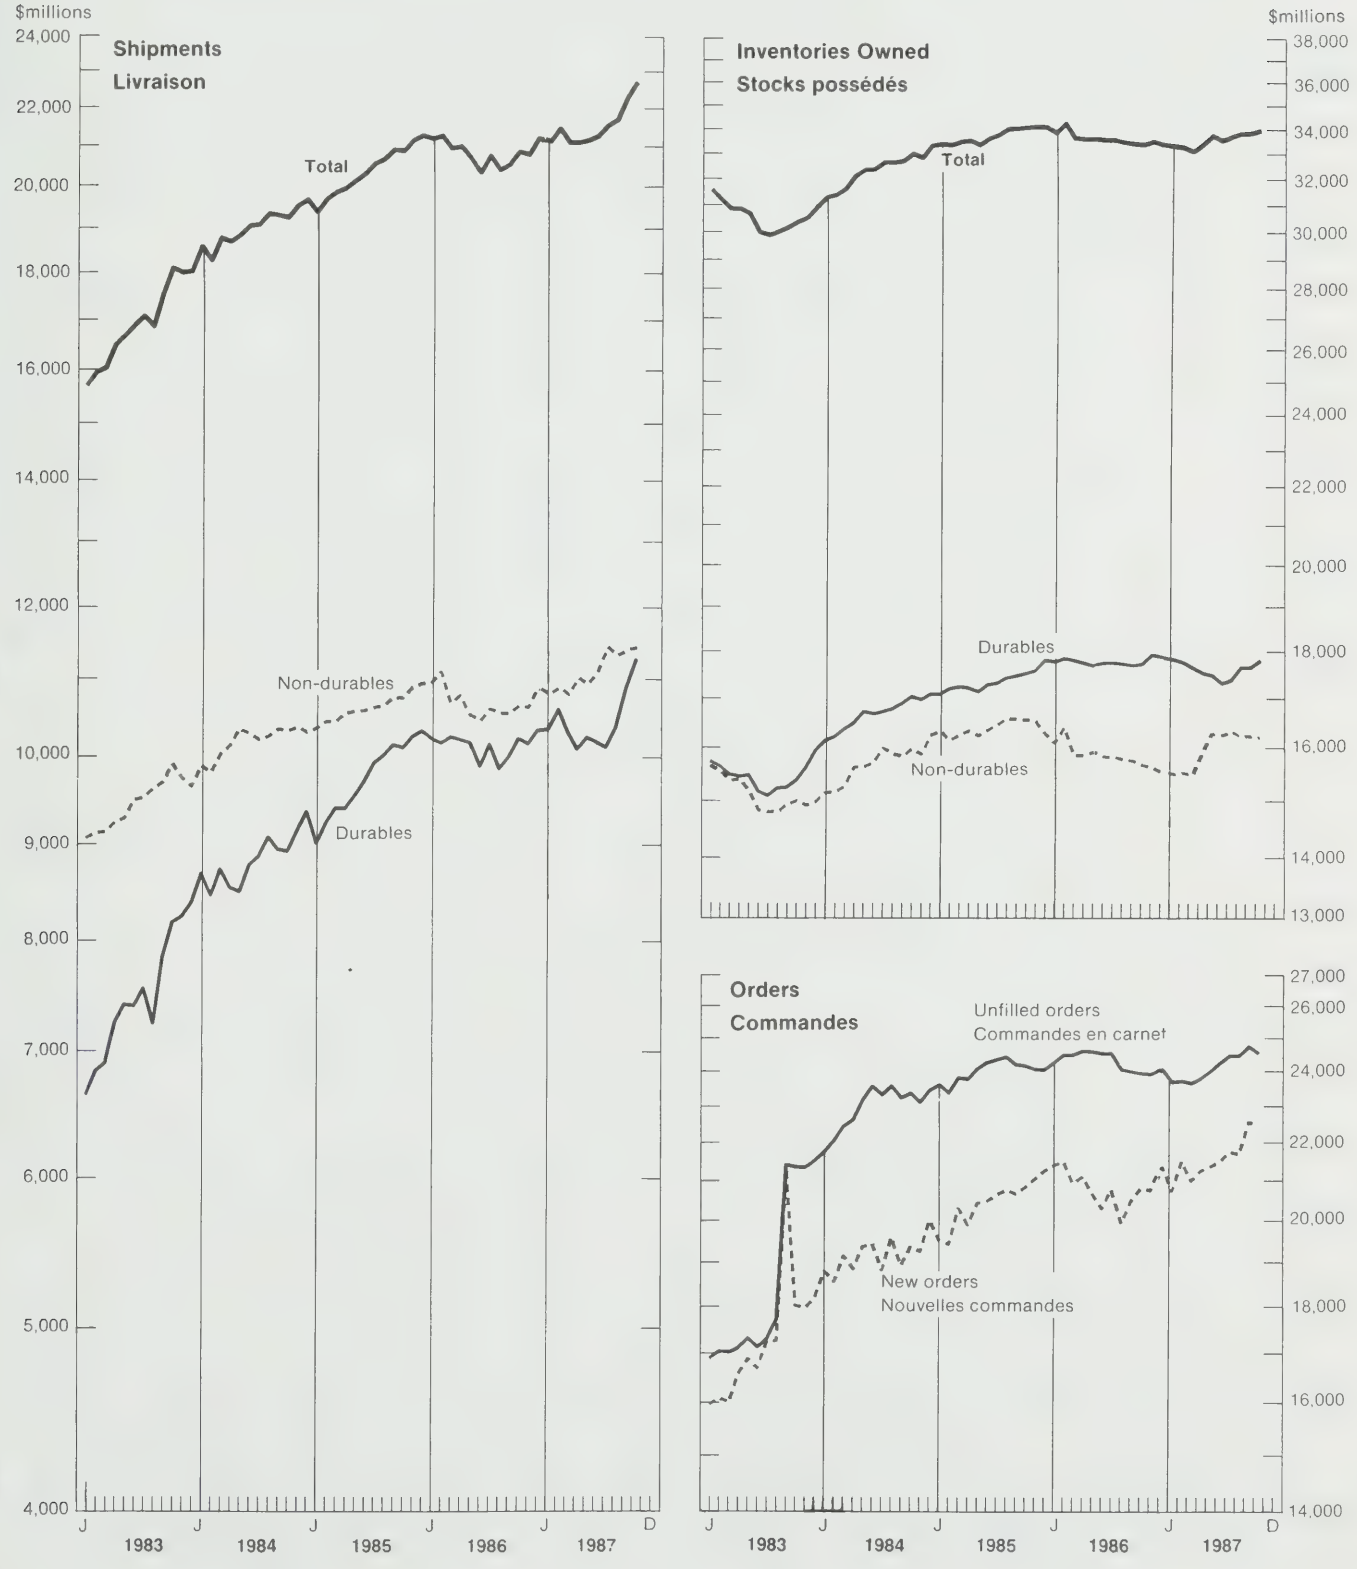

- Not adjusted for seasonal variation, manufacturers' shipments in October 1987 were estimated at $23,597 million, 7.0% higher than the October 1986 level. Cumulative shipments for the first ten months of 1987 have been estimated at $216,547 million, 3.6% higher than the value for the corresponding period in 1986.

- On a estimé à $23,597 millions les livraisons non désaisonnalisées des manufacturiers en octobre 1987, ce qui représente une augmentation de 7.0% par rapport au niveau d'octobre 1986. Pour les dix premiers mois de 1987, les livraisons estimatives ont totalisé $216,547 millions, soit un gain de 3.6% par rapport à la période correspondante en 1986.

FOOTNOTES

Tables 1 and 5

(1) Although separate series for the Yukon and the Northwest Territories are not published, their values are included in the Canada total.
(2) The value for total shipments contains four industries where "production" is used instead of shipments. Please see concepts and methods, 4th paragraph for more details.

Tables 2 to 4

(1) Series which contain no significant seasonality, include: raw materials in the rubber products industries, primary textiles industries and refined petroleum and coal products industries; and also goods in process for tabacco products industries. Therefore, these series are repeated without adjustment in the tables of seasonally adjusted estimates and aggregates of which they are components. Small differences in the unadjusted values, when repeated, may result from rounding techniques.

Table 6

(1) For this industry, "production" is used instead of shipments. For explanation, please see concepts and methods, 4th paragraph.
(2) The Data for industry 3711 Industrial Inorganic Chemical Industries n.e.c. no longer includes the data for industry 3721 Chemical Fertilizer and Fertilizer Materials Industries.

Note: Figures may not add due to rounding.

NOTES

Tableaux 1 et 5

(1) Même si les séries pour le Yukon et les Territoires du Nord-Ouest ne sont pas publiées elles sont cependant inclues dans le total pour le Canada.
(2) La valeur des livraisons totales contient quatre industries ou la "production" est utilisée au lieu des livraisons. Pour plus de détails, voir le 4ième paragraphe des concepts et méthodes.

Tableaux 2 à 4

(1) Les séries qui sont peu sensibles aux variations saisonnières incluent: les matières premières dans les industries des produits de caoutchouc, des textiles de première transformation et des produits raffinés du pétrole et du charbon; et également les produits en cours dans les industries du tabac. Le tableau de la série désaisonnalisée répète donc les valeurs non corrigées. Les différences minimes entre les séries sont attribuables à la technique d'arrondissement utilisée.

Tableau 6

(1) Pour cette industrie, la "production" est utilisée au lieu des livraisons. Pour plus de détails, voir le 4ième paragraphe des concepts et méthodes.
(2) Les données pour l'industrie 3711 industries des produits chimiques inorganiques d'usage industriel, n.c.a. ne comprennent plus les données de l'industrie 3721 industries des engrais chimiques et de matières pour engrais.

Nota: Les chiffres ne totaliseront peut-être pas en raison de l'arrondissement.

CONCEPTS AND METHODS

Estimation Method

Inventories, shipments and orders values in this publication constitute monthly projections of annual census of manufactures values based on returns from a stratified, systematic sample of manufacturing establishments. The data in the January 1985 publication are the first to be published under the 1980 Standard Industrial Classification (SIC). The data in this publication are benchmarked to the 1983 Census. Values for years prior to 1983 have been previously benchmarked to the corresponding census data and the aggregate of monthly shipments in those years should correspond with published census values. Because the monthly estimates subsequent to 1983 are projections, these totals are subject to adjustment when more recent census data become available. Inventory estimates for December published here, differ from year-end census values to the extent that census totals include individual establishment reports for fiscal years that may end on dates other than December 31. Unfilled orders are published for industries where maintenance of a continuing record of the value of an establishment's backlog of orders is a normal part of the accounting procedure.

The population of manufacturing establishments is divided into groups of large, medium and small establishments according to the value of shipments reported for the census year. Monthly values are sought for all large establishments and a sample is chosen separately for each of the other two size groups. Sample unit values are weighted according to the inverse of their probability of selection. This sample is revised annually in accordance with the census base. To facilitate timely response from company accounting departments, combined reports are accepted from companies with more than one establishment. Estimates of current values are accepted from establishments where the inventory and unfilled orders levels are not measured at the end of each accounting period. There are about 12,500 establishments in the reporting panel.

Inventories

Isolation of component values of inventory by level of fabrication in each industry, where possible, is important for economic studies as well as for derivation of production values. To facilitate this, respondents are asked to report their book values of raw materials, goods in process, finished products and progress payments separately. The inventory levels are calculated on a Canada-wide basis, not by province.

Both inventory held and inventory owned are published. The difference between inventory held and inventory owned is the value of progress payments received by manufacturers for partially completed items such as aircraft, railroad rolling stocks, ships and structures using fabricated steel. As work proceeds on such items, total inventory values increase until the time of delivery. By deducting the balance of progress payments on manufacturers' books from total inventory, the value of manufacturers' investment in inventory is derived.

CONCEPTS ET MÉTHODES

Méthode d'estimation

Les chiffres sur les stocks, les livraisons et les commandes qui figurent dans cette publication sont des projections mensuelles des résultats du recensement annuel des manufactures établies à partir des déclarations d'un échantillon stratifié et systématique d'établissements manufacturiers. Les données que contient la publication de janvier 1985 sont les premières qui soient publiées sous la Classification Type des Industries (C.T.I.) de 1980. Les données que contient la publication sont ajustées en fonction du recensement de 1983. Les chiffres pour les années jusqu'à 1983 inclusivement ont été raccordés aux recensements en cause et la somme des livraisons mensuelles de ces années doit être égale aux résultats de recensements qui ont été publiés. Comme les estimations mensuelles postérieures à 1983 sont des projections, elles pourront être rectifiées lorsqu'on disposera des données de recensement plus récentes. Les estimations sur les stocks publiées dans ce bulletin sont celles de décembre, elles diffèrent donc des chiffres du recensement se rapportant à la fin de l'année dans la mesure où les totaux du recensement comprennent les déclarations de certains établissements pour des années financières qui peuvent prendre fin à d'autres dates qu'au 31 décembre. Les commandes en carnet sont publiées pour les industries où la comptabilité normale prévoit de consigner la valeur des commandes en souffrance des établissements d'une manière suivie.

La population des établissements manufacturiers se divise en trois groupes d'établissements (grands, moyens et petits) suivant la valeur des livraisons déclarées pour l'année de recensement. On demande des déclarations mensuelles à tous les grands établissements et on tire un échantillon séparé pour chacun des deux autres groupes. Les valeurs de l'échantillon sont pondérées en relation inverse de la probabilité qu'elles soient choisies. Cette échantillon est revisé annuellement suivant les résultats du recensement. Dans le but d'aider les services de comptabilité des sociétés à envoyer leurs déclarations à temps. Statistique Canada accepte une déclaration globale pour les sociétés ayant plus d'un établissement et une estimation des chiffres courants pour les établissements dont les stocks et les commandes en carnet ne sont pas recensés à la fin de chaque exercise comptable. On compte environ 12,500 établissements dans l'échantillon.

Les stocks

Il est important d'isoler les chiffres des éléments des stocks selon le stage de fabrication dans chaque industrie, lorsque c'est possible, afin de faire des études économiques et des extrapolations des chiffres de production. Â cet effet, on demande aux enquêtés de déclarer séparément la valeur comptable de leurs matières premières, de leurs produits en cours, de leurs produits finis et de leurs acomptes à valoir. Les niveaux des stocks sont calculés pour l'ensemble du Canada et non au niveau provincial.

On publie la valeur des stocks détenus et des stocks possédés. La différence entre les deux donne la valeur des acomptes versés par les fabricants sur des produits dont la fabrication n'est qu'en partie achevée comme les avions, le matériel ferroviaire roulant, les bâteaux et des constructions qui utilisent des semi-produits en acier. Â mesure que la fabrication de ces produits avance, la valeur globale des stocks augmente jusqu'au moment de la livraison. En déduisant le solde des acomptes comptabilisés par les fabricants de l'ensemble des stocks, on obtient la somme investie dans les stocks par les fabricants.

In order to reduce the distortion in the shipments of the four above mentioned industries that would be caused when responding companies finally treat such items of relatively high value as completed sales, a "production" value is used instead of shipments. This production value is derived from adjusting monthly shipments by the monthly change in inventories held (Goods in process held + Finished products). The raw materials are not included in the calculation since production tries to measure "work done" during the month.

Orders

Most establishments that maintain order books strike a value of unfilled orders at the end of each accounting period. The survey seeks this value which is defined as orders received but not shipped or treated as a sale whether or not work has been done on them or they can be filled from existing stocks. No estimate of this value is made for those industries where orders are customarily filled from stocks on hand and order books are, accordingly, not generally maintained.

New orders, a series of considerable economic interest, is a residual value derived from shipments and unfilled orders. All shipments within any month result from an order received either during that month or at some earlier time. New orders are calculated as the sum of total shipments within any month plus the change in the total of unfilled orders from the end of the previous month to the end of the month under review.

Imputation

Values must be imputed for those establishments that have not reported in time for compilation of monthly estimates. This is largely done by mechanical methods which take into account the activity of similar establishments from which reports have been received. In conjunction with preliminary estimates for the current month, the estimates for the preceeding month are revised to account for any late returns. When respondents report values for periods earlier than those of the revised current estimates, the responses are used to correct the trends when the series are updated to new census benchmarks.

Revisions

Definitions, classifications and groupings are based on those used by the census of manufactures.

The January 1973 issue of this publication contains a more detailed description of the concepts and survey methods for these series.

Historical Series

Major series published in this issue are stored in CANSIM, the computerized time series data bank of Statis-

Afin de réduire la distortion qui surviendrait dans les quatre industries en cause au moment où les sociétés observées considèrent en fin de compte des produits d'une valeur relativement grande comme des ventes achevées, une valeur de "production" est utilisée au lieu des livraisons. Pour arriver à cette valeur de production, il s'agit d'ajuster la valeur mensuelle des livraisons par le changement mensuel dans les inventaires détenus (Produits en cours détenus + Produits finis). Les matières premières ne sont pas incluses dans ce calcul car nous essayons de calculer le "travail fait" durant le mois.

Les commandes

La plupart des établissements qui tiennent des carnets de commandes établissent la valeur des commandes en carnet à la fin de chaque exercice comptable. Lors de l'enquête, nous demandons cette valeur, qui est considérée comme commandes reçues mais non encore expédiées, que des travaux aient été effectués ou non à leur égard, lorsque la commande peut être honorée à partir des stocks existants. Cette valeur n'est pas estimée dans le cas des entreprises qui exécutent habituellement les commandes des réceptions, à partir de leurs stocks et qui, par conséquent, ne tiennent pas de carnet de commande.

Les séries sur les nouvelles commandes, qui présentent beaucoup d'intérêt du point de vue économique, donnent la valeur résiduelle établie à partir des livraisons et des commandes en carnet. Toutes les livraisons effectuées au cours d'un mois donné résultent d'une commande reçue, soit pendant ce mois, soit avant. Les nouvelles commandes sont calculées à partir du total des livraisons au cours d'un mois donné plus la différence entre le total des commandes en carnet à la fin du mois précédent et le total des commandes en carnet à la fin du mois observé.

Imputation

L'imputation des données se fait surtout par des moyens mécaniques qui tiennent compte de l'activité d'établissements semblables qui ont fait parvenir des déclarations. Conformément aux estimations préliminaires pour le mois courant, on révise les estimations pour le mois précédent afin de prendre en compte toutes données déclarées en retard. Lorsque les répondants déclarent les chiffres correspondants aux périodes antérieures à celle des estimations révisées actuelles, les réponses servent à corriger les tendances lorsque les séries sont mises à jour d'après les nouvelles données repéré du recensement.

Révisions

Les définitions, les classifications et les groupes sont basés sur ceux du recensement des manufactures.

Le numéro de janvier 1973 de cette publication contient une description plus détaillée des concepts et des méthodes d'enquête de cette série.

Séries chronologiques

Les séries importantes publiées dans cette livraison sont stockées dans le CANSIM, banque électronique de données sur les

tics Canada. All or any part of these series may be purchased on magnetic tape or as computer print-outs. For further information direct inquiries to:

CANSIM,
Application Consulting Section,
Statistics Canada,
Ottawa, Ontario, K1A 0Z8

Seasonal Adjustment

The seasonal adjustment method applied to the series consists of the ratio-to-moving average method in use at Statistics Canada. The X-11 - ARIMA program is used for seasonal adjustment.

Some series containing no significant seasonality or very high irregularity have not been seasonally adjusted. In these cases, unadjusted values are repeated in the tables of seasonally adjusted data. See footnotes for series affected.

Months for Cyclical Dominance

The MCD or months for cyclical dominance values located at the right of the Cansim databank reference number (e.g. D 315674) for seasonally adjusted series, indicate the smallest span of months for which the average change in the cyclical factor is greater than that for the irregular factor. For the smoothest series the MCD is one; for the most erratic series, it is twelve. Application of a moving average of the period of the MCD will tend to smooth irregular movements that may obscure the underlying trend-cycle.

The Economic Use Classification (EUC)

The concept of the Economic Use Classification (EUC) consists of combining activities of individual industries at the finest level of aggregation identified by the Standard Industrial Classification (SIC) and bring together, in a general sense, industries whose outputs are directed towards the different types of markets served by industry or, in other words, groups that reflect demand on manufacturing industries by elements of the gross national expenditure.

The present EUC consists of six mutually exclusive groups and a supplementary automotive group. Although the output of an industry may serve a market that spans more than one classification, no attempt is made to subdivide that industry's output into finer detail than that identified by the SIC. Thus the distribution of specific industries to economic uses is determined by the perceived market for the greatest share of the industry's output.

Désaisonnalisation

On désaisonnalise des séries en calculant le rapport à la moyenne mobile, suivant les méthodes utilisées à Statistique Canada. Il s'agit en l'occurrance du programme normalisé qui sert à appliquer le version X-11 - ARMMI.

Pour quelques séries particulières, il n'y a pas de saisonnalité d'importance, ou il y a trop d'irrégularité. Ces séries n'ont pas été désaisonnalisées. Pour ces cas, les valeurs, sans désaisonnalisation ont été répétées dans les tableaux des séries désaisonnalisées. Voir les notes pour les séries affectées.

Mois de dominance cyclique

Les valeurs de M.D.C. (mois de dominance cyclique) sont situées à la droite du numéro de référence de la Banque de données de "Cansim" (ex: D 315674) pour les séries désaisonnalisées, indiquent le plus petit nombre de mois pour lequel la variation moyenne du facteur cyclique est plus grande que celle du facteur d'irrégularité. Le M.D.C. est de un pour les séries les plus régulières et de douze pour les plus fluctuantes. L'application d'une moyenne mobile de la période des M.D.C. aidera à lisser les mouvements irréguliers qui pourraient masquer la tendance cyclique implicite.

Classification des groupes selon l'utilisation économique (CGUE)

Le concept de la classification des groupes selon l'utilisation économique (CGUE) est de combiner les activités des industries à leur plus bas niveau d'aggrégation identifié par la classification type des industries (C.T.I.) et de rassembler les industries d'après le marché desservi ou encore, en groupe d'après la demande sur les industries manufacturières par les éléments de la dépense nationale brute.

La CGUE comprend six groupes mutuellement exclusifs et une classification complémentaire des industries connexes de l'automobile. Bien que la production d'une industrie peut servir plus d'un marché, aucun effort est fait pour subdiviser la production de cette industrie dans plus de détail que fournit par la C.T.I. Donc, la distribution d'industries spécifiques à un groupe économique se fait entièrement vers le marché qui est perçu comme étant le plus important pour l'industrie en question.

Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Shipments, Inventories and Orders Section,
Industry Division,

Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous diverses formes. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Concepts et méthodes	71

November 1987

Posting an increase for the eighth consecutive month, shipments for all Canadian manufacturing industries reached a new high in November. The gain in shipments, however, was more modest than in recent months. Most of the twenty-two major industry groups showed moderate gains with paper and allied products industries and the fabricated metal products industries registering the largest increases.

Both new orders and the backlog of unfilled orders increased after recording declines in October. The increases mainly reflected gains for the primary metals industries, fabricated metal products industries and the electrical and electronic products industries.

Highlights

- Preliminary estimates indicate that the seasonally adjusted value of **shipments** increased 0.6% in November to a level of $22,911 million. This increase, though more modest than those recorded in recent months, marked a continuation of the gains recorded since April 1987. Most increases were concentrated in the durable goods industries, up 0.8% to $11,430 million while non-durable goods industries showed a slight increase of 0.3% to $11,481 million.

- Seasonally adjusted, **inventories owned** by manufacturers increased 1.3% to $34,549 million in November. This was the seventh increase in the last eight months. Total inventories held were up 1.2% to $36,054 million for the month of November. Increases of 1.6% in goods in process, 1.3% in finished products and 0.8% in raw materials accounted for the raise.

- The **ratio of** seasonally adjusted **total inventory owned to** seasonally adjusted **shipments** was 1.51:1 in November. This ratio has remained near a record low for the last three months. The ratio of finished goods inventory to shipments went from 0.52:1 to 0.53:1.

- **New orders** rebounded in November, posting an increase of 1.7%. Though new orders have increased an average of about 1% per month since March 1987, monthly changes have been more volatile over the past four months ranging from -0.3% to 4.1%. In the durable goods industries, new orders with an estimated value of $11,557 million were 4.4% higher than the October value. In the non-durable goods industries, new orders were valued at $11,427 million, down 0.8%.

- The seasonally adjusted **unfilled orders backlog** at $24,691 million, increased 0.3% in November. This increase extends the upward trend experienced since April 1987. In the durable goods industries, unfilled orders were up 0.6% to $21,961 million. Unfilled orders decreased 2.0% in the non-durable goods industries to $2,729 million.

Novembre 1987

Après avoir affiché une augmentation pour un huitième mois consécutif, les livraisons pour l'ensemble des industries manufacturières canadiennes ont atteint un niveau record en novembre. Le gain des livraisons, quoi qu'il en soit, a été plus modeste que ceux des récents mois. La majorité des vingt-deux groupes majeurs de l'industrie ont montré des gains modestes. Les industries du papier et des produits connexes et les industries de première transformation des métaux affichent les plus fortes augmentations.

Les nouvelles commandes et les commandes en carnet se sont accrues, après des baisses enrégistrées en octobre. La majorité de ces hausses ont été rapportées notamment dans les industries de première transformation des métaux, les industries de la fabrication des produits métalliques et les industries des produits électriques et électroniques.

Faits Saillants

- Les estimations préliminaires indiquent que la valeur désaisonnalisée des **livraisons** a augmenté de 0.6% en novembre pour atteindre $22,911 millions. Cette augmentation, bien que plus modeste que celles enregistrées dans les récents mois, prolonge la série des gains enrégistrés depuis avril 1987. Les hausses étaient concentrées dans les industries des biens durables, en hausse de 0.8% à $11,430 millions, tandis que les industries des biens non durables montraient une légère augmentation de 0.3% à $11,481 millions.

- La valeur désaisonnalisée des **stocks possédés** par les manufacturiers a augmenté de 1.3%, se situant à $34,549 millions en novembre. Il s'agit de la septième augmentation en huit mois. Les stocks détenus ont augmenté de 1.2% à $36,054 millions pour le mois de novembre. Des hausses au chapitre des produits en cours de transformation (+ 1.6%), des produits finis (+ 1.3%) et des matières premières (+ 0.8%) ont contribué à ce gain.

- Le **rapport** du total des **stocks possédés** désaisonnalisés aux **livraisons** désaisonnalisées était de 1.51:1 en novembre. Ce rapport est demeuré, pour les trois derniers mois, près de son niveau le plus bas. Le rapport des produits finis aux livraisons est passé de 0.52:1 à 0.53:1.

- Les **nouvelles commandes** ont rebondi en novembre, affichant une augmentation de 1.7%. Bien que les nouvelles commandes avaient augmenté en moyenne d'environ un pour cent par mois depuis mars 1987, les variations mensuelles ont été plus volatiles dans les quatres derniers mois, s'échelonnant entre -0.3% et 4.1%. Dans les industries des biens durables, la valeur estimative des nouvelles commandes était supérieure de 4.4% à la valeur d'octobre et s'établissait à $11,557 millions. Les nouvelles commandes de biens non durables ont atteint $11,427 millions, en baisse de 0.8%.

- La valeur désaisonnalisée des **commandes en carnet**, a montré une augmentation de 0.3% en novembre pour atteindre $24,691 millions. Cette augmentation prolonge la tendance à la hausse observé depuis avril 1987. Les commandes en carnet des biens durables ont augmenté de 0.6% à $21,961 millions, alors que celles des biens non durables ont diminué de 2.0% à $2,729 millions.

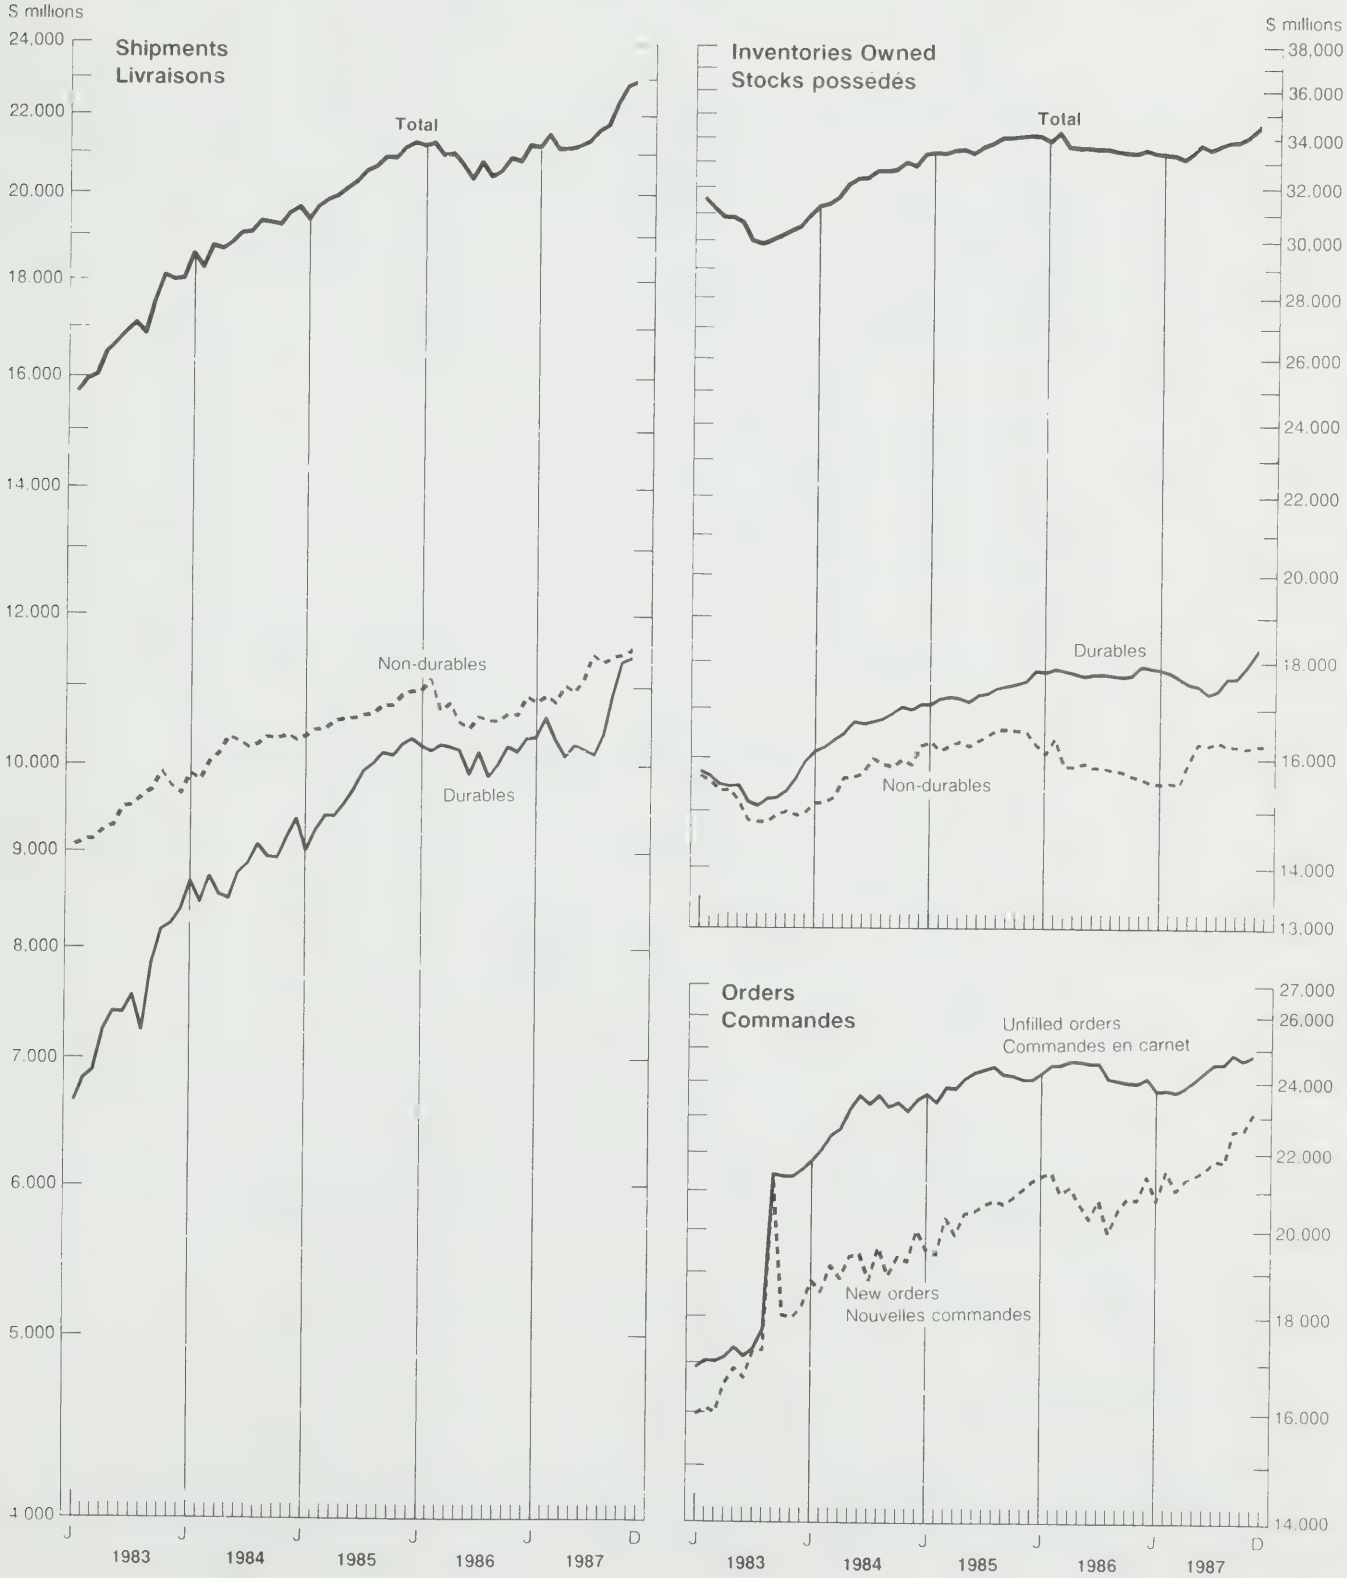

- Not adjusted for seasonal variation, manufacturers' shipments in November 1987 were estimated at $23,112 million, 12.0% higher than the November 1986 level. Cumulative shipments for the first eleven months of 1987 have been estimated at $239,708 million, 4.3% higher than the value for the corresponding period in 1986.

- On a estimé à $23,112 millions les livraisons non désaisonnalisées des manufacturiers en novembre 1987, ce qui représente une augmentation de 12.0% par rapport au niveau de novembre 1986. Pour les onzes premiers mois de 1987, les livraisons estimatives ont totalisé $239,708 millions, soit un gain de 4.3% par rapport à la période correspondante en 1986.

FOOTNOTES

Tables 1 and 5

(1) Although separate series for the Yukon and the Northwest Territories are not published, their values are included in the Canada total.
(2) The value for total shipments contains four industries where "production" is used instead of shipments. Please see concepts and methods, 4th paragraph for more details.

Tables 2 to 4

(1) Series which contain no significant seasonality include: raw materials in the rubber products industries, primary textiles industries and refined petroleum and coal products industries; and also goods in process for tobacco products industries. Therefore, these series are repeated without adjustment in the tables of seasonally adjusted estimates and aggregates of which they are components. Small differences in the unadjusted values, when repeated, may result from rounding techniques.

Table 6

(1) For this industry, "production" is used instead of shipments. For explanation, please see concepts and methods, 4th paragraph.
(2) The data for industry 3711, Industrial Inorganic Chemical Industries n.e.c., no longer includes the data for industry 3721, Chemical Fertilizer and Fertilizer Materials Industries.

Note: Figures may not add due to rounding.

NOTES

Tableaux 1 et 5

(1) Même si les séries pour le Yukon et les Territoires du Nord-Ouest ne sont pas publiées elles sont cependant inclues dans le total pour le Canada.
(2) La valeur des livraisons totales contient quatre industries ou la "production" est utilisée au lieu des livraisons. Pour plus de détails, voir le 4ième paragraphe des concepts et méthodes.

Tableaux 2 à 4

(1) Les séries qui sont peu sensibles aux variations saisonnières incluent: les matières premières dans les industries des produits de caoutchouc, des textiles de première transformation et des produits raffinés du pétrole et du charbon; et également les produits en cours dans les industries du tabac. Le tableau de la série désaisonnalisée répète donc les valeurs non corrigées. Les différences minimes entre les séries sont attribuables à la technique d'arrondissement utilisée.

Tableau 6

(1) Pour cette industrie, la "production" est utilisée au lieu des livraisons. Pour plus de détails, voir le 4ième paragraphe des concepts et méthodes.
(2) Les données pour l'industrie 3711, industries des produits chimiques inorganiques d'usage industriel, n.c.a., ne comprennent plus les données de l'industrie 3721, industries des engrais chimiques et de matières pour engrais.

Nota: Les chiffres ne totaliseront peut-être pas en raison de l'arrondissement.

CONCEPTS AND METHODS

Estimation Method

Inventories, shipments and orders values in this publication constitute monthly projections of annual census of manufactures values based on returns from a stratified, systematic sample of manufacturing establishments. The data in the January 1985 publication are the first to be published under the 1980 Standard Industrial Classification (SIC). The data in this publication are benchmarked to the 1983 Census. Values for years prior to 1983 have been previously benchmarked to the corresponding census data and the aggregate of monthly shipments in those years should correspond with published census values. Because the monthly estimates subsequent to 1983 are projections, these totals are subject to adjustment when more recent census data become available. Inventory estimates for December published here, differ from year-end census values to the extent that census totals include individual establishment reports for fiscal years that may end on dates other than December 31. Unfilled orders are published for industries where maintenance of a continuing record of the value of an establishment's backlog of orders is a normal part of the accounting procedure.

The population of manufacturing establishments is divided into groups of large, medium and small establishments according to the value of shipments reported for the census year. Monthly values are sought for all large establishments and a sample is chosen separately for each of the other two size groups. Sample unit values are weighted according to the inverse of their probability of selection. This sample is revised annually in accordance with the census base. To facilitate timely response from company accounting departments, combined reports are accepted from companies with more than one establishment. Estimates of current values are accepted from establishments where the inventory and unfilled orders levels are not measured at the end of each accounting period. There are about 12,500 establishments in the reporting panel.

Inventories

Isolation of component values of inventory by level of fabrication in each industry, where possible, is important for economic studies as well as for derivation of production values. To facilitate this, respondents are asked to report their book values of raw materials, goods in process, finished products and progress payments separately. The inventory levels are calculated on a Canada-wide basis, not by province.

Both inventory held and inventory owned are published. The difference between inventory held and inventory owned is the value of progress payments received by manufacturers for partially completed items such as aircraft, railroad rolling stocks, ships and structures using fabricated steel. As work proceeds on such items, total inventory values increase until the time of delivery. By deducting the balance of progress payments on manufacturers' books from total inventory, the value of manufacturers' investment in inventory is derived.

CONCEPTS ET MÉTHODES

Méthode d'estimation

Les chiffres sur les stocks, les livraisons et les commandes qui figurent dans cette publication sont des projections mensuelles des résultats du recensement annuel des manufactures établies à partir des déclarations d'un échantillon stratifié et systématique d'établissements manufacturiers. Les données que contient la publication de janvier 1985 sont les premières qui soient publiées sous la Classification Type des Industries (C.T.I.) de 1980. Les données que contient la publication sont ajustées en fonction du recensement de 1983. Les chiffres pour les années jusqu'à 1983 inclusivement ont été raccordés aux recensements en cause et la somme des livraisons mensuelles de ces années doit être égale aux résultats de recensements qui ont été publiés. Comme les estimations mensuelles postérieures à 1983 sont des projections, elles pourront être rectifiées lorsqu'on disposera des données de recensement plus récentes. Les estimations sur les stocks publiées dans ce bulletin sont celles de décembre, elles diffèrent donc des chiffres du recensement se rapportant à la fin de l'année dans la mesure où les totaux du recensement comprennent les déclarations de certains établissements pour des années financières qui peuvent prendre fin à d'autres dates qu'au 31 décembre. Les commandes en carnet sont publiées pour les industries où la comptabilité normale prévoit de consigner la valeur des commandes en souffrance des établissements d'une manière suivie.

La population des établissements manufacturiers se divise en trois groupes d'établissements (grands, moyens et petits) suivant la valeur des livraisons déclarées pour l'année de recensement. On demande des déclarations mensuelles à tous les grands établissements et on tire un échantillon séparé pour chacun des deux autres groupes. Les valeurs de l'échantillon sont pondérées en relation inverse de la probabilité qu'elles soient choisies. Cet échantillon est revisé annuellement suivant les résultats du recensement. Dans le but d'aider les services de comptabilité des sociétés à envoyer leurs déclarations à temps, Statistique Canada accepte une déclaration globale pour les sociétés ayant plus d'un établissement et une estimation des chiffres courants pour les établissements dont les stocks et les commandes en carnet ne sont pas recensés à la fin de chaque exercice comptable. On compte environ 12,500 établissements dans l'échantillon.

Les stocks

Il est important d'isoler les chiffres des éléments des stocks selon le stage de fabrication dans chaque industrie, lorsque c'est possible, afin de faire des études économiques et des extrapolations des chiffres de production. À cet effet, on demande aux enquêtés de déclarer séparément la valeur comptable de leurs matières premières, de leurs produits en cours, de leurs produits finis et de leurs acomptes à valoir. Les niveaux des stocks sont calculés pour l'ensemble du Canada et non au niveau provincial.

On publie la valeur des stocks détenus et des stocks possédés. La différence entre les deux donne la valeur des acomptes versés par les fabricants sur des produits dont la fabrication n'est qu'en partie achevée comme les avions, le matériel ferroviaire roulant, les bateaux et des constructions qui utilisent des produits semi-finis en acier. À mesure que la fabrication de ces produits avance, la valeur globale des stocks augmente jusqu'au moment de la livraison. En déduisant le solde des acomptes comptabilisés par les fabricants de l'ensemble des stocks, on obtient la somme investie dans les stocks par les fabricants.

In order to reduce the distortion in the shipments of the four above mentioned industries that would be caused when responding companies finally treat such items of relatively high value as completed sales, a "production" value is used instead of shipments. This production value is derived from adjusting monthly shipments by the monthly change in inventories held (Goods in process held + Finished products). The raw materials are not included in the calculation since production tries to measure "work done" during the month.

Orders

Most establishments that maintain order books strike a value of unfilled orders at the end of each accounting period. The survey seeks this value which is defined as orders received but not shipped or treated as a sale whether or not work has been done on them or they can be filled from existing stocks. No estimate of this value is made for those industries where orders are customarily filled from stocks on hand and order books are, accordingly, not generally maintained.

New orders, a series of considerable economic interest, is a residual value derived from shipments and unfilled orders. All shipments within any month result from an order received either during that month or at some earlier time. New orders are calculated as the sum of total shipments within any month plus the change in the total of unfilled orders from the end of the previous month to the end of the month under review.

Imputation

Values must be imputed for those establishments that have not reported in time for compilation of monthly estimates. This is largely done by mechanical methods which take into account the activity of similar establishments from which reports have been received. In conjunction with preliminary estimates for the current month, the estimates for the preceeding month are revised to account for any late returns. When respondents report values for periods earlier than those of the revised current estimates, the responses are used to correct the trends when the series are updated to new census benchmarks.

Revisions

Definitions, classifications and groupings are based on those used by the census of manufactures.

The January 1973 issue of this publication contains a more detailed description of the concepts and survey methods for these series.

Historical Series

Major series published in this issue are stored in CANSIM, the computerized time series data bank of Statis-

Afin de réduire la distorsion qui surviendrait dans les quatre industries en cause au moment où les sociétés observées considèrent en fin de compte des produits d'une valeur relativement grande comme des ventes achevées, une valeur de "production" est utilisée au lieu des livraisons. Pour arriver à cette valeur de production, il s'agit d'ajuster la valeur mensuelle des livraisons par le changement mensuel dans les inventaires détenus (Produits en cours détenus + Produits finis). Les matières premières ne sont pas incluses dans ce calcul car nous essayons de calculer le "travail fait" durant le mois.

Les commandes

La plupart des établissements qui tiennent des carnets de commandes établissent la valeur des commandes en carnet à la fin de chaque exercice comptable. Lors de l'enquête, nous demandons cette valeur, qui est considérée comme commandes reçues mais non encore expédiées, que des travaux aient été effectués ou non à leur égard, lorsque la commande peut être honorée à partir des stocks existants. Cette valeur n'est pas estimée dans le cas des entreprises qui exécutent habituellement les commandes des réceptions, à partir de leurs stocks et qui, par conséquent, ne tiennent pas de carnet de commande.

Les séries sur les nouvelles commandes, qui présentent beaucoup d'intérêt du point de vue économique, donnent la valeur résiduelle établie à partir des livraisons et des commandes en carnet. Toutes les livraisons effectuées au cours d'un mois donné résultent d'une commande reçue, soit pendant ce mois, soit avant. Les nouvelles commandes sont calculées à partir du total des livraisons au cours d'un mois donné plus la différence entre le total des commandes en carnet à la fin du mois précédent et le total des commandes en carnet à la fin du mois observé.

Imputation

L'imputation des données se fait surtout par des moyens mécaniques qui tiennent compte de l'activité d'établissements semblables qui ont fait parvenir des déclarations. Conformément aux estimations préliminaires pour le mois courant, on révise les estimations pour le mois précédent afin de prendre en compte toutes données déclarées en retard. Lorsque les répondants déclarent les chiffres correspondants aux périodes antérieures à celle des estimations révisées actuelles, les réponses servent à corriger les tendances lorsque les séries sont mises à jour d'après les nouvelles données repères du recensement.

Révisions

Les définitions, les classifications et les groupes sont basés sur ceux du recensement des manufactures.

Le numéro de janvier 1973 de cette publication contient une description plus détaillée des concepts et des méthodes d'enquête de cette série.

Séries chronologiques

Les séries importantes publiées dans cette livraison sont emmagasinées dans le CANSIM, banque électronique de données sur les

tics Canada. All or any part of these series may be purchased on magnetic tape or as computer print-outs. For further information direct inquiries to:

CANSIM,
Application Consulting Section,
Statistics Canada,
Ottawa, Ontario, K1A 0Z8

Seasonal Adjustment

The seasonal adjustment method applied to the series consists of the ratio-to-moving average method in use at Statistics Canada. The X-11 - ARIMA program is used for seasonal adjustment.

Some series containing no significant seasonality or very high irregularity have not been seasonally adjusted. In these cases, unadjusted values are repeated in the tables of seasonally adjusted data. See footnotes for series affected.

Months for Cyclical Dominance

The MCD or months for cyclical dominance values located at the right of the Cansim databank reference number (e.g. D 315674) for seasonally adjusted series, indicate the smallest span of months for which the average change in the cyclical factor is greater than that for the irregular factor. For the smoothest series the MCD is one; for the most erratic series, it is twelve. Application of a moving average of the period of the MCD will tend to smooth irregular movements that may obscure the underlying trend-cycle.

The Economic Use Classification (EUC)

The concept of the Economic Use Classification (EUC) consists of combining activities of individual industries at the finest level of aggregation identified by the Standard Industrial Classification (SIC) and bring together, in a general sense, industries whose outputs are directed towards the different types of markets served by industry or, in other words, groups that reflect demand on manufacturing industries by elements of the gross national expenditure.

The present EUC consists of six mutually exclusive groups and a supplementary automotive group. Although the output of an industry may serve a market that spans more than one classification, no attempt is made to subdivide that industry's output into finer detail than that identified by the SIC. Thus the distribution of specific industries to economic uses is determined by the perceived market for the greatest share of the industry's output.

séries chronologiques de Statistique Canada. On peut acheter toutes ces séries ou une partie d'entre elles sur bandes magnétiques ou sous forme d'états mécanographiques. Pour tout renseignement complémentaire, s'adresser au:

CANSIM,
Section de consultants aux applications,
Statistique Canada,
Ottawa (Ontario) K1A 0Z8

Désaisonnalisation

On désaisonnalise les séries en calculant le rapport à la moyenne mobile, suivant les méthodes utilisées à Statistique Canada. Il s'agit en l'occurrance du programme normalisé qui sert à appliquer le version X-11 - ARMMI.

Pour quelques séries particulières, il n'y a pas de saisonnalité d'importance, ou il y a trop d'irrégularité. Ces séries n'ont pas été désaisonnalisées. Pour ces cas, les valeurs, sans désaisonnalisation ont été répétées dans les tableaux des séries désaisonnalisées. Voir les notes pour les séries affectées.

Mois de dominance cyclique

Les valeurs de M.D.C. (mois de dominance cyclique) sont situées à la droite du numéro de référence de la Banque de données de "Cansim" (ex: D 315674) pour les séries désaisonnalisées et indiquent le plus petit nombre de mois pour lequel la variation moyenne du facteur cyclique est plus grande que celle du facteur d'irrégularité. Le M.D.C. est de un pour les séries les plus régulières et de douze pour les plus fluctuantes. L'application d'une moyenne mobile de la période des M.D.C. aidera à lisser les mouvements irréguliers qui pourraient masquer la tendance cyclique implicite.

Classification des groupes selon l'utilisation économique (CGUE)

Le concept de la classification des groupes selon l'utilisation économique (CGUE) est de combiner les activités des industries à leur plus bas niveau d'aggrégation identifié par la classification type des industries (C.T.I.) et de rassembler les industries d'après le marché desservi ou encore, en groupe d'après la demande sur les industries manufacturières par les éléments de la dépense nationale brute.

La CGUE comprend six groupes mutuellement exclusifs et une classification complémentaire des industries connexes de l'automobile. Bien que la production d'une industrie peut servir plus d'un marché, aucun effort est fait pour subdiviser la production de cette industrie dans plus de détail que fournit par la C.T.I. Donc, la distribution d'industries spécifiques à un groupe économique se fait entièrement vers le marché qui est perçu comme étant le plus important pour l'industrie en question.

in the most comprehensive source of coroporate financial data available.

Based on tax information from over 500,000 Canadian Corporations **Corporation Financial Statistics** provides tables of detailed balance sheets, income statements and retained earnings for 182 industry groups.

An essential tool which will help you:

- identify industry sectors with the best rates of return
- compare the financial position of competing industries
- monitor and research the Canadian economy and business world.

Corporation Financial Statistics #61–207, bilingual; $50 in Canada, $51.50 other countries.

dans une des sources d'information les plus détaillées sur les finances des sociétés.

Basé sur l'information fiscale de plus de 500,000 entreprises canadiennes, **Statistiques financières des sociétés** offre des tableaux explicatifs sur les bilans, les déclarations de revenus et les bénéfices non répartis de quelque 182 groupes industriels.

C'est un outil essentiel qui vous aidera à:

- identifier le secteur industriel ayant les meilleurs taux de revenus
- comparer la situation financière des industries en concurrence
- scruter l'économie canadienne et le monde des affaires.

What does the average family do with $30,000?

In 1984 the average family in Canada had a disposable income of $30,000. **Income after Tax, Distribution by Size in Canada, 1984** classifies the after-tax income of Canadian families and individuals. Income data are given by size of income, region, source of income, family size, number of children, age and sex of the family head, and other characteristics.

Use this report to examine how different policies might affect different socio-economic groups. Study problems of the poor and elderly. Get an accurate reading of the purchasing power of Canadians.

Que fait une famille type avec $30,000?

En 1984, le revenu disponible d'une famille canadienne type était de $30,000. La publication **Revenu après impôt, répartition selon la taille du revenu au Canada, 1984** indique le revenu après impôt des familles et des particuliers canadiens. Les données sur le revenu sont présentées selon la taille du revenu, la région, la source de revenu, la taille de la famille, le nombre d'enfants, l'âge et le sexe du soutien de famille et d'autres caractéristiques.

Ce rapport permet de déterminer l'incidence que peuvent avoir différentes politiques sur divers groupes socio-économiques. Il permet aussi d'étudier les problèmes que rencontrent les personnes pauvres et les personnes âgées et d'obtenir des données précises sur le pouvoir d'achat des Canadiens.

ALL IN ONE PLACE
THE ECONOMIC FACTS AND ANALYSIS YOU NEED

Canadian Economic Observer:
Statistics Canada's New Monthly Economic Report

No other report on the Canadian economy has this much to offer

This month's data

Up-to-the-minute data includes all major statistical series released two weeks prior to publication.

Current Economic Conditions

Brief, "to the point" summary of the economy's performance over the month, including trend analysis of employment, output, demand and leading indicators.

Statistical and Technical Notes

Information about new or revised statistical programs and methodological developments unique to Statistics Canada.

Major Economic Events

Chronology of international and national events that affect Canada's economy

Feature Articles

In-depth research on current business and economic issues.

Statistical Summary

Statistical tables, charts and graphs cover national accounts, output, demand, trade, labour and financial markets.

AND MORE...

Regional Analysis

Provincial breakdowns of key economic indicators.

International Overview

Digest of economic performance in Canada's most important trading partners — Europe, Japan, and the U.S.A.

TOUT POUR VOUS!
LES DONNÉES ÉCONOMIQUES ET L'ANALYSE QUE VOUS RECHERCHEZ

L'Observateur économique canadien:
Le nouveau bulletin économique mensuel de Statistique Canada

Aucune autre publication ne vous procure autant de renseignements relatifs à l'économie canadienne

Les données du mois

Des données de dernière heure comprenant toutes les séries de statistiques les plus importantes qui ont été diffusées deux semaines avant la date de publication du bulletin.

La situation économique actuelle

Le rendement de l'économie au cours du mois, présenté en bref, comportant une analyse de l'emploi, de la productivité, de la demande et des principaux indicateurs précurseurs des tendances de l'activité économique.

Des notes techniques et statistiques

Des notes portant sur les nouveaux programmes statistiques ou les programmes révisés et sur les progrès en matière de méthodologie propres à Statistique Canada.

Les principaux événements économiques

Des événements internationaux et nationaux influençant l'économie canadienne, présentés en ordre chronologique.

Des études spéciales

Une recherche approfondie des affaires et des questions d'actualité liées à l'économie.

Un aperçu statistique

Des tableaux, des graphiques et des diagrammes englobant les statistiques des comptes nationaux, de la productivité, de la demande, du commerce, de l'emploi, des marchés financiers, etc.

ET PLUS ENCORE...

Une analyse régionale

Des ventilations par province d'indicateurs économiques stratégiques.

Un survol de l'économie internationale

Un sommaire du rendement de l'économie des partenaires commerciaux du Canada, comme l'Europe, le Japon et les États-Unis.

Data in Many Forms ...

Statistics Canada disseminates data in a variety of forms. In addition to publications, both standard and special tabulations are offered on computer print-outs, microfiche and microfilm, and magnetic tapes. Maps and other geographic reference materials are available for some types of data. Direct access to aggregated information is possible through CANSIM, Statistics Canada's machine-readable data base and retrieval system.

How to Obtain More Information

Inquiries about this publication and related statistics or services should be directed to:

Shipments, Inventories and Orders Section,
Industry Division,

Statistics Canada, Ottawa, K1A 0T6 (Telephone: 951-9832) or to the Statistics Canada reference centre in:

Des données sous plusieurs formes ...

Statistique Canada diffuse les données sous diverses formes. Outre les publications, des totalisations habituelles et spéciales sont offertes sur imprimés d'ordinateur, sur microfiches et microfilms et sur bandes magnétiques. Des cartes et d'autres documents de référence géographiques sont disponibles pour certaines sortes de données. L'accès direct à des données agrégées est possible par le truchement de CANSIM, la base de données ordinolingue et le système d'extraction de Statistique Canada.

Comment obtenir d'autres renseignements

Toutes demandes de renseignements au sujet de cette publication ou de statistiques et services connexes doivent être adressées à:

Section des livraisons, des stocks et des commandes,
Division des industries,

Statistique Canada, Ottawa, K1A 0T6 (téléphone: 951-9832) ou au centre de consultation de Statistique Canada à:

December 1987

With moderate to strong gains recorded in December, seasonally adjusted shipments, inventories and orders of Canadian manufacturers posted record highs. By the close of 1987, monthly shipments surpassed $23 billion for the first time, while inventories were approaching $35 billion.

Increases in eight of the last nine months have pushed inventories to a record level. But despite the increasing trend for inventories owned, the ratio of total inventory owned to shipments has fallen to an all-time low. Stronger gains for shipments than for inventories during the last half of 1987 led to this result.

HIGHLIGHTS

Seasonally Adjusted

- Preliminary estimates indicate that the value of shipments increased 1.1% in December to a level of $23,139 million. Continuous increases recorded since April 1987 pushed monthly shipments to a new high. Most increases were concentrated in the non-durable goods industries , up 2.3% to $11,768 million. The largest gains occurred in the chemical and chemical products industries (+ $125 million), food industries (+ $91 million) and paper and allied products industries (+ $60 million). Shipments of durable goods industries were down 0.3% to $11,371 million.

- **Inventories owned** by manufacturers increased 1.0% to $34,822 million in December. Following decreases in the first three months of 1987, increases in eight of the last nine months pushed inventories to a record level in December. Total inventories held were up 1.0% to $36,407 million for the month of December. A decrease of 0.3% in finished products was partly offset by increases of 2.9% in goods in process and 0.8% in raw materials.

- The **ratio of** total **inventory owned to shipments** fell to a record low of 1.50:1 for the second time in the last three months. During the first eight months of 1987, the ratio remained relatively stable around 1.57:1, while an average of 1.51:1 has been recorded for the last four months of the year. The ratio of finished goods inventory to shipments went from 0.53:1 to 0.54:1.

- **New orders** also reached a record high with an increase of 0.8% from November. New orders have increased an average of about 1% per month since March 1987. In the non-durable goods industries, new orders with an estimated value of $11,802 million were 2.9% higher than the November value. In the durable goods industries, new orders were valued at $11,437 million, down 1.2%.

- The **unfilled orders backlog** at $24,866 million, increased 0.4% in December. This increase continued

Décembre 1987

Des gains, variant de modéré à fort en décembre, ont amené la valeur désaisonnalisée des livraisons canadiennes manufacturières, des stocks et des commandes à de nouveaux sommets. À la fin de 1987, les livraisons mensuelles ont dépassé la barrière des $23 milliards pour la première fois, tandis que les stocks se sont approchés des $35 milliards.

Des augmentations au cours de huit des neuf derniers mois ont amené les stocks possédés à un niveau record. Malgré la tendance à la hausse pour les stocks possédés, le rapport du total des stocks possédés aux livraisons a chuté à son niveau le plus bas de tous les temps. Des gains plus élevés pour les livraisons que pour les stocks pendant la dernière moitié de 1987 ont amené ce résultat.

FAITS SAILLANTS

Après désaisonnalisation

- Les estimations préliminaires indiquent que la valeur des **livraisons** a augmenté de 1.1% en décembre pour atteindre $23,139 millions. Les augmentations continues, enregistrées depuis avril 1987, ont amené les livraisons mensuelles à un nouveau sommet. Les hausses étaient concentrées dans les industries des biens non durables, en hausse de 2.3% à $11,768 millions. Les gains les plus élevés ont eu lieu dans les industries chimiques (+ $125 millions), les industries des aliments (+ $91 millions) et les industries du papier et produits connexes (+ $60 millions). Les livraisons dans les industries des biens durables ont diminué de 0.3% à $11,371 millions.

- Les **stocks possédés** par les manufacturiers ont enregistré un gain de 1.0% pour atteindre $34,822 millions en décembre. Des diminutions dans les trois premiers mois de 1987, suivies d'augmentations au cours de huit des neuf derniers mois ont amené les stocks à un niveau record en décembre. Les stocks détenus ont augmenté de 1.0% à $36,407 millions pour le mois de décembre. Une baisse a été enregistrée au chapitre des produits finis (- 0.3%) mais des augmentations au chapitre des produits en cours de transformation (+ 2.9%) et des matières premières (+ 0.8%) ont été également enregistrées.

- Le **rapport** du total **des stocks possédés aux livraisons** est passé à son niveau le plus bas, soit de 1.50:1, pour la seconde fois depuis les trois derniers mois. Pendant les huit premiers mois de 1987, le rapport est demeuré relativement stable à environ 1.57:1, pendant qu'une moyenne de 1.51:1 a été enregistrée pour les quatre derniers mois de l'année. Le rapport des produits finis aux livraisons est passé de 0.53:1 à 0.54:1.

- Les **nouvelles commandes** ont également atteint un niveau record avec une augmentation de 0.8% comparativement à novembre. Les nouvelles commandes se sont accrues en moyenne d'environ un pour cent par mois depuis mars 1987. Dans les industries des biens non durables, la valeur estimative des nouvelles commandes était supérieure de 2.9% à la valeur de novembre et s'établissait à $11,802 millions. Les nouvelles commandes de biens durables ont atteint $11,437 millions, en baisse de 1.2%.

- Les **commandes en carnet**, à $24,866 millions, ont montré une hausse de 0.4% en décembre. Cette augmentation a

the upward trend experienced since April 1987. In the durable goods industries, unfilled orders were up 0.3% to $22,079 million while non-durable goods industries showed an increase of 1.2% to $2,788 million.

Not Seasonally Adjusted

- Manufacturers' shipments in December 1987 were estimated at $21,996 million, 9.4% higher than the December 1986 level.

- The total value of shipments for 1987 was $261.7 billion, 4.7% higher than the 1986 total. An increase of 2.2% was recorded between 1985 and 1986.

prolongé la tendance à la hausse observée depuis avril 1987. Les commandes en carnet des biens durables ont augmenté de 0.3% à $22,079 millions, alors que celles des biens non durables ont augmenté de 1.2% à $2,788 millions.

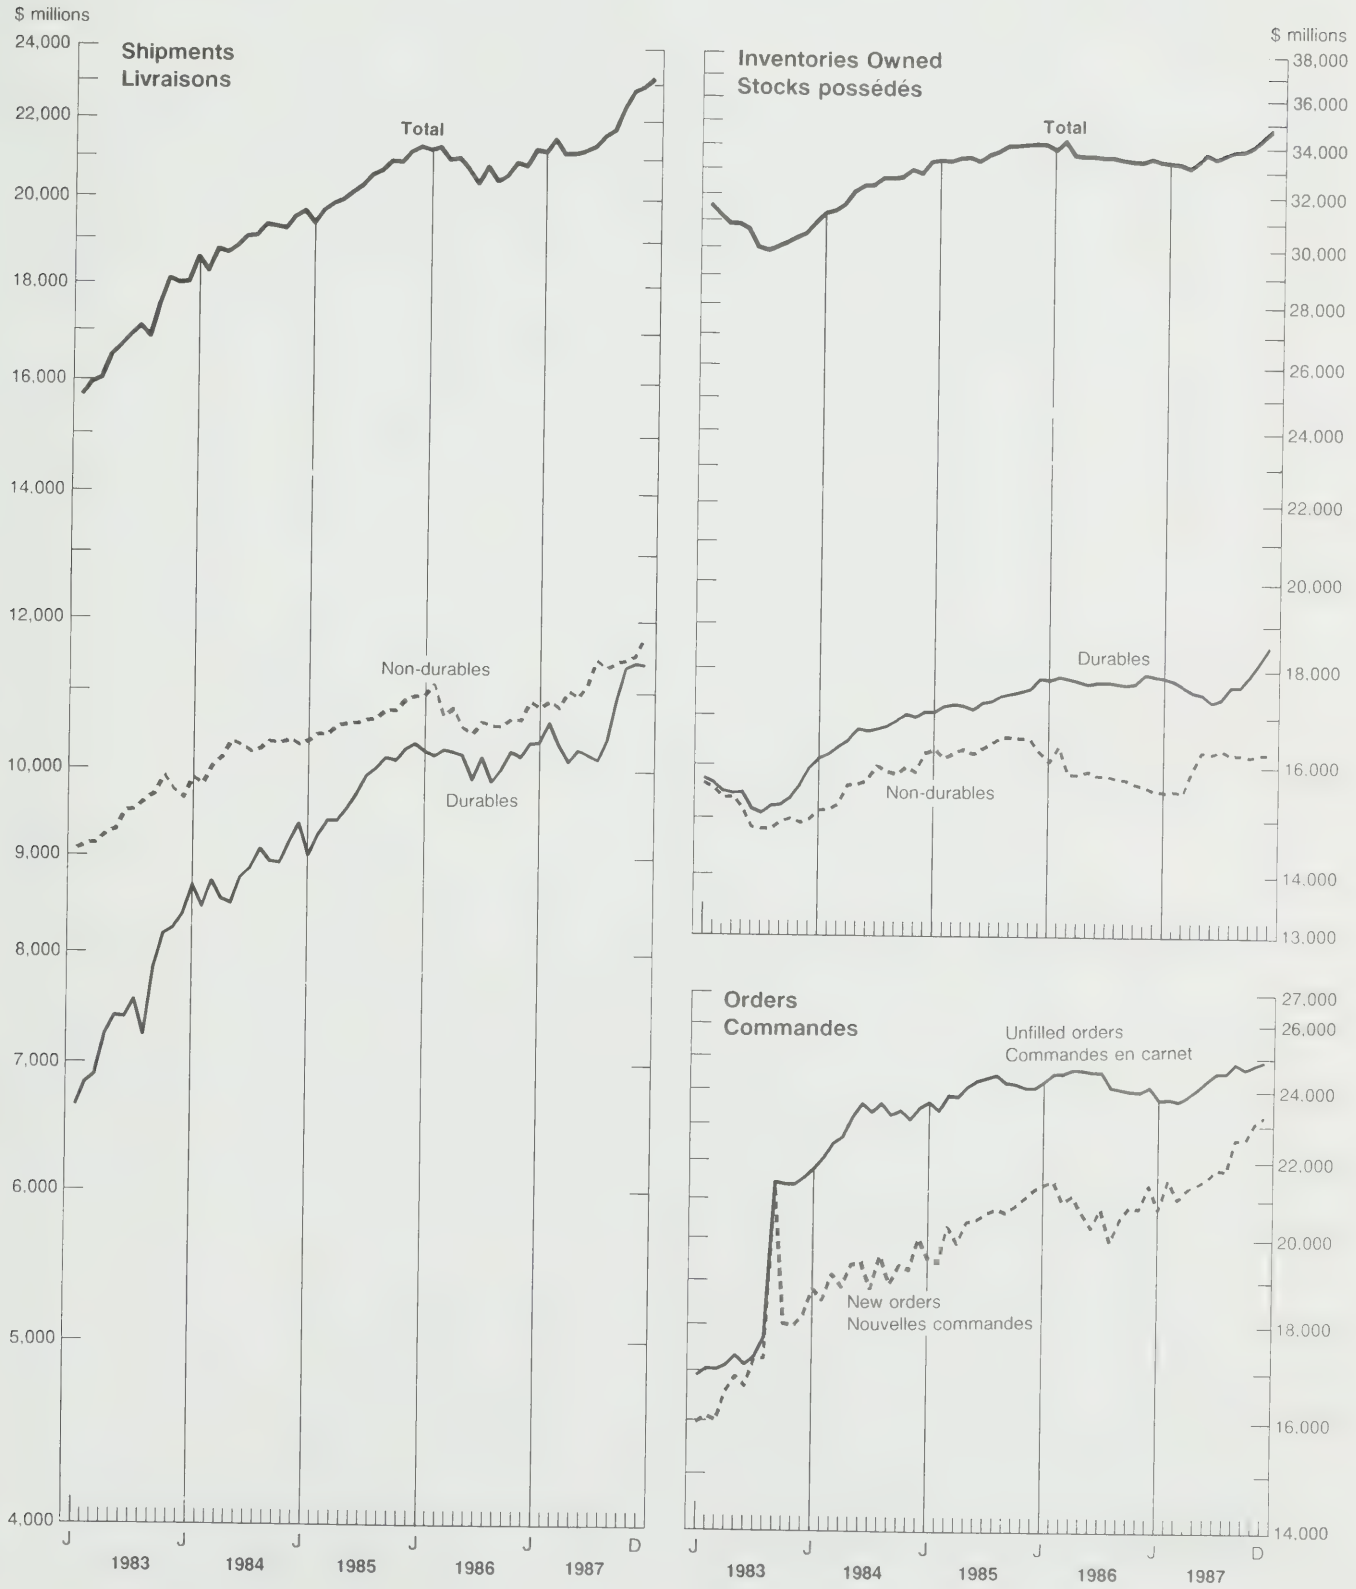

Avant désaisonnalisation

- On a estimé à $21,996 millions les livraisons des manufacturiers en décembre 1987, ce qui représente une augmentation de 9.4% par rapport au niveau de décembre 1986.

- La valeur totale des livraisons pour 1987 a été de $261.7 milliards, soit un gain de 4.7% par rapport à la période correspondante en 1986. Un gain de 2.2% avait été enregistré entre 1985 et 1986.

FOOTNOTES

Tables 1 and 5

(1) Although separate series for the Yukon and the Northwest Territories are not published, their values are included in the Canada total.
(2) The value for total shipments contains four industries where "production" is used instead of shipments. Please see concepts and methods, 4th paragraph for more details.

Tables 2 to 4

(1) Series which contain no significant seasonality include: raw materials in the rubber products industries, primary textiles industries and refined petroleum and coal products industries; and also goods in process for tobacco products industries. Therefore, these series are repeated without adjustment in the tables of seasonally adjusted estimates and aggregates of which they are components. Small differences in the unadjusted values, when repeated, may result from rounding techniques.

Table 6

(1) For this industry, "production" is used instead of shipments. For explanation, please see concepts and methods, 4th paragraph.
(2) The data for industry 3711, Industrial Inorganic Chemical Industries n.e.c., no longer includes the data for industry 3721, Chemical Fertilizer and Fertilizer Materials Industries.

Note: Figures may not add due to rounding.

NOTES

Tableaux 1 et 5

(1) Même si les séries pour le Yukon et les Territoires du Nord-Ouest ne sont pas publiées elles sont cependant inclues dans le total pour le Canada.
(2) La valeur des livraisons totales contient quatre industries ou la "production" est utilisée au lieu des livraisons. Pour plus de détails, voir le 4ième paragraphe des concepts et méthodes.

Tableaux 2 à 4

(1) Les séries qui sont peu sensibles aux variations saisonnières incluent: les matières premières dans les industries des produits de caoutchouc, des textiles de première transformation et des produits raffinés du pétrole et du charbon; et également les produits en cours dans les industries du tabac. Le tableau de la série désaisonnalisée répète donc les valeurs non corrigées. Les différences minimes entre les séries sont attribuables à la technique d'arrondissement utilisée.

Tableau 6

(1) Pour cette industrie, la "production" est utilisée au lieu des livraisons. Pour plus de détails, voir le 4ième paragraphe des concepts et méthodes.
(2) Les données pour l'industrie 3711, industries des produits chimiques inorganiques d'usage industriel, n.c.a., ne comprennent plus les données de l'industrie 3721, industries des engrais chimiques et de matières pour engrais.

Nota: Les chiffres ne totaliseront peut-être pas en raison de l'arrondissement.

CONCEPTS AND METHODS

Estimation Method

Inventories, shipments and orders values in this publication constitute monthly projections of annual census of manufactures values based on returns from a stratified, systematic sample of manufacturing establishments. The data in the January 1985 publication are the first to be published under the 1980 Standard Industrial Classification (SIC). The data in this publication are benchmarked to the 1983 Census. Values for years prior to 1983 have been previously benchmarked to the corresponding census data and the aggregate of monthly shipments in those years should correspond with published census values. Because the monthly estimates subsequent to 1983 are projections, these totals are subject to adjustment when more recent census data become available. Inventory estimates for December published here, differ from year-end census values to the extent that census totals include individual establishment reports for fiscal years that may end on dates other than December 31. Unfilled orders are published for industries where maintenance of a continuing record of the value of an establishment's backlog of orders is a normal part of the accounting procedure.

The population of manufacturing establishments is divided into groups of large, medium and small establishments according to the value of shipments reported for the census year. Monthly values are sought for all large establishments and a sample is chosen separately for each of the other two size groups. Sample unit values are weighted according to the inverse of their probability of selection. This sample is revised annually in accordance with the census base. To facilitate timely response from company accounting departments, combined reports are accepted from companies with more than one establishment. Estimates of current values are accepted from establishments where the inventory and unfilled orders levels are not measured at the end of each accounting period. There are about 12,500 establishments in the reporting panel.

Inventories

Isolation of component values of inventory by level of fabrication in each industry, where possible, is important for economic studies as well as for derivation of production values. To facilitate this, respondents are asked to report their book values of raw materials, goods in process, finished products and progress payments separately. The inventory levels are calculated on a Canada-wide basis, not by province.

Both inventory held and inventory owned are published. The difference between inventory held and inventory owned is the value of progress payments received by manufacturers for partially completed items such as aircraft, railroad rolling stocks, ships and structures using fabricated steel. As work proceeds on such items, total inventory values increase until the time of delivery. By deducting the balance of progress payments on manufacturers' books from total inventory, the value of manufacturers' investment in inventory is derived.

CONCEPTS ET MÉTHODES

Méthode d'estimation

Les chiffres sur les stocks, les livraisons et les commandes qui figurent dans cette publication sont des projections mensuelles des résultats du recensement annuel des manufactures établies à partir des déclarations d'un échantillon stratifié et systématique d'établissements manufacturiers. Les données que contient la publication de janvier 1985 sont les premières qui soient publiées sous la Classification Type des Industries (C.T.I.) de 1980. Les données que contient la publication sont ajustées en fonction du recensement de 1983. Les chiffres pour les années jusqu'à 1983 inclusivement ont été raccordés aux recensements en cause et la somme des livraisons mensuelles de ces années doit être égale aux résultats de recensements qui ont été publiés. Comme les estimations mensuelles postérieures à 1983 sont des projections, elles pourront être rectifiées lorsqu'on disposera des données de recensement plus récentes. Les estimations sur les stocks publiées dans ce bulletin sont celles de décembre, elles diffèrent donc des chiffres du recensement se rapportant à la fin de l'année dans la mesure où les totaux du recensement comprennent les déclarations de certains établissements pour des années financières qui peuvent prendre fin à d'autres dates qu'au 31 décembre. Les commandes en carnet sont publiées pour les industries où la comptabilité normale prévoit de consigner la valeur des commandes en souffrance des établissements d'une manière suivie.

La population des établissements manufacturiers se divise en trois groupes d'établissements (grands, moyens et petits) suivant la valeur des livraisons déclarées pour l'année de recensement. On demande des déclarations mensuelles à tous les grands établissements et on tire un échantillon séparé pour chacun des deux autres groupes. Les valeurs de l'échantillon sont pondérées en relation inverse de la probabilité qu'elles soient choisies. Cet échantillon est revisé annuellement suivant les résultats du recensement. Dans le but d'aider les services de comptabilité des sociétés à envoyer leurs déclarations à temps, Statistique Canada accepte une déclaration globale pour les sociétés ayant plus d'un établissement et une estimation des chiffres courants pour les établissements dont les stocks et les commandes en carnet ne sont pas recensés à la fin de chaque exercice comptable. On compte environ 12,500 établissements dans l'échantillon.

Les stocks

Il est important d'isoler les chiffres des éléments des stocks selon le stage de fabrication dans chaque industrie, lorsque c'est possible, afin de faire des études économiques et des extrapolations des chiffres de production. À cet effet, on demande aux enquêtés de déclarer séparément la valeur comptable de leurs matières premières, de leurs produits en cours, de leurs produits finis et de leurs acomptes à valoir. Les niveaux des stocks sont calculés pour l'ensemble du Canada et non au niveau provincial.

On publie la valeur des stocks détenus et des stocks possédés. La différence entre les deux donne la valeur des acomptes versés par les fabricants sur des produits dont la fabrication n'est qu'en partie achevée comme les avions, le matériel ferroviaire roulant, les bateaux et des constructions qui utilisent des produits semi-finis en acier. À mesure que la fabrication de ces produits avance, la valeur globale des stocks augmente jusqu'au moment de la livraison. En déduisant le solde des acomptes comptabilisés par les fabricants de l'ensemble des stocks, on obtient la somme investie dans les stocks par les fabricants.

In order to reduce the distortion in the shipments of the four above mentioned industries that would be caused when responding companies finally treat such items of relatively high value as completed sales, a "production" value is used instead of shipments. This production value is derived from adjusting monthly shipments by the monthly change in inventories held (Goods in process held + Finished products). The raw materials are not included in the calculation since production tries to measure "work done" during the month.

Orders

Most establishments that maintain order books strike a value of unfilled orders at the end of each accounting period. The survey seeks this value which is defined as orders received but not shipped or treated as a sale whether or not work has been done on them or they can be filled from existing stocks. No estimate of this value is made for those industries where orders are customarily filled from stocks on hand and order books are, accordingly, not generally maintained.

New orders, a series of considerable economic interest, is a residual value derived from shipments and unfilled orders. All shipments within any month result from an order received either during that month or at some earlier time. New orders are calculated as the sum of total shipments within any month plus the change in the total of unfilled orders from the end of the previous month to the end of the month under review.

Imputation

Values must be imputed for those establishments that have not reported in time for compilation of monthly estimates. This is largely done by mechanical methods which take into account the activity of similar establishments from which reports have been received. In conjunction with preliminary estimates for the current month, the estimates for the preceeding month are revised to account for any late returns. When respondents report values for periods earlier than those of the revised current estimates, the responses are used to correct the trends when the series are updated to new census benchmarks.

Revisions

Definitions, classifications and groupings are based on those used by the census of manufactures.

The January 1973 issue of this publication contains a more detailed description of the concepts and survey methods for these series.

Historical Series

Major series published in this issue are stored in CANSIM, the computerized time series data bank of Statis-

Afin de réduire la distorsion qui surviendrait dans les quatre industries en cause au moment où les sociétés observées considèrent en fin de compte des produits d'une valeur relativement grande comme des ventes achevées, une valeur de "production" est utilisée au lieu des livraisons. Pour arriver à cette valeur de production, il s'agit d'ajuster la valeur mensuelle des livraisons par le changement mensuel dans les inventaires détenus (Produits en cours détenus + Produits finis). Les matières premières ne sont pas incluses dans ce calcul car nous essayons de calculer le "travail fait" durant le mois.

Les commandes

La plupart des établissements qui tiennent des carnets de commandes établissent la valeur des commandes en carnet à la fin de chaque exercice comptable. Lors de l'enquête, nous demandons cette valeur, qui est considérée comme commandes reçues mais non encore expédiées, que des travaux aient été effectués ou non à leur égard, lorsque la commande peut être honorée à partir des stocks existants. Cette valeur n'est pas estimée dans le cas des entreprises qui exécutent habituellement les commandes des réceptions, à partir de leurs stocks et qui, par conséquent, ne tiennent pas de carnet de commande.

Les séries sur les nouvelles commandes, qui présentent beaucoup d'intérêt du point de vue économique, donnent la valeur résiduelle établie à partir des livraisons et des commandes en carnet. Toutes les livraisons effectuées au cours d'un mois donné résultent d'une commande reçue, soit pendant ce mois, soit avant. Les nouvelles commandes sont calculées à partir du total des livraisons au cours d'un mois donné plus la différence entre le total des commandes en carnet à la fin du mois précédent et le total des commandes en carnet à la fin du mois observé.

Imputation

L'imputation des données se fait surtout par des moyens mécaniques qui tiennent compte de l'activité d'établissements semblables qui ont fait parvenir des déclarations. Conformément aux estimations préliminaires pour le mois courant, on révise les estimations pour le mois précédent afin de prendre en compte toutes données déclarées en retard. Lorsque les répondants déclarent les chiffres correspondants aux périodes antérieures à celle des estimations révisées actuelles, les réponses servent à corriger les tendances lorsque les séries sont mises à jour d'après les nouvelles données repères du recensement.

Révisions

Les définitions, les classifications et les groupes sont basés sur ceux du recensement des manufactures.

Le numéro de janvier 1973 de cette publication contient une description plus détaillée des concepts et des méthodes d'enquête de cette série.

Séries chronologiques

Les séries importantes publiées dans cette livraison sont emmagasinées dans le CANSIM, banque électronique de données sur les

tics Canada. All or any part of these series may be purchased on magnetic tape or as computer print-outs. For further information direct inquiries to:

CANSIM,
Application Consulting Section,
Statistics Canada,
Ottawa, Ontario, K1A 0Z8

Seasonal Adjustment

The seasonal adjustment method applied to the series consists of the ratio-to-moving average method in use at Statistics Canada. The X-11 - ARIMA program is used for seasonal adjustment.

Some series containing no significant seasonality or very high irregularity have not been seasonally adjusted. In these cases, unadjusted values are repeated in the tables of seasonally adjusted data. See footnotes for series affected.

Months for Cyclical Dominance

The MCD or months for cyclical dominance values located at the right of the Cansim databank reference number (e.g. D 315674) for seasonally adjusted series, indicate the smallest span of months for which the average change in the cyclical factor is greater than that for the irregular factor. For the smoothest series the MCD is one; for the most erratic series, it is twelve. Application of a moving average of the period of the MCD will tend to smooth irregular movements that may obscure the underlying trend-cycle.

The Economic Use Classification (EUC)

The concept of the Economic Use Classification (EUC) consists of combining activities of individual industries at the finest level of aggregation identified by the Standard Industrial Classification (SIC) and bring together, in a general sense, industries whose outputs are directed towards the different types of markets served by industry or, in other words, groups that reflect demand on manufacturing industries by elements of the gross national expenditure.

The present EUC consists of six mutually exclusive groups and a supplementary automotive group. Although the output of an industry may serve a market that spans more than one classification, no attempt is made to subdivide that industry's output into finer detail than that identified by the SIC. Thus the distribution of specific industries to economic uses is determined by the perceived market for the greatest share of the industry's output.

séries chronologiques de Statistique Canada. On peut acheter toutes ces séries ou une partie d'entre elles sur bandes magnétiques ou sous forme d'états mécanographiques. Pour tout renseignement complémentaire, s'adresser au:

CANSIM,
Section de consultants aux applications,
Statistique Canada,
Ottawa (Ontario) K1A 0Z8

Désaisonnalisation

On désaisonnalise les séries en calculant le rapport à la moyenne mobile, suivant les méthodes utilisées à Statistique Canada. Il s'agit en l'occurrance du programme normalisé qui sert à appliquer le version X-11 - ARMMI.

Pour quelques séries particulières, il n'y a pas de saisonnalité d'importance, ou il y a trop d'irrégularité. Ces séries n'ont pas été désaisonnalisées. Pour ces cas, les valeurs, sans désaisonnalisation ont été répétées dans les tableaux des séries désaisonnalisées. Voir les notes pour les séries affectées.

Mois de dominance cyclique

Les valeurs de M.D.C. (mois de dominance cyclique) sont situées à la droite du numéro de référence de la Banque de données de "Cansim" (ex: D 315674) pour les séries désaisonnalisées et indiquent le plus petit nombre de mois pour lequel la variation moyenne du facteur cyclique est plus grande que celle du facteur d'irrégularité. Le M.D.C. est de un pour les séries les plus régulières et de douze pour les plus fluctuantes. L'application d'une moyenne mobile de la période des M.D.C. aidera à lisser les mouvements irréguliers qui pourraient masquer la tendance cyclique implicite.

Classification des groupes selon l'utilisation économique (CGUE)

Le concept de la classification des groupes selon l'utilisation économique (CGUE) est de combiner les activités des industries à leur plus bas niveau d'aggrégation identifié par la classification type des industries (C.T.I.) et de rassembler les industries d'après le marché desservi ou encore, en groupe d'après la demande sur les industries manufacturières par les éléments de la dépense nationale brute.

La CGUE comprend six groupes mutuellement exclusifs et une classification complémentaire des industries connexes de l'automobile. Bien que la production d'une industrie peut servir plus d'un marché, aucun effort est fait pour subdiviser la production de cette industrie dans plus de détail que fournit par la C.T.I. Donc, la distribution d'industries spécifiques à un groupe économique se fait entièrement vers le marché qui est perçu comme étant le plus important pour l'industrie en question.

Aucune autre publication ne vous procure autant de renseignements relatifs à l'économie canadienne

Les données du mois

Des données de dernière heure comprenant toutes les séries de statistiques les plus importantes qui ont été diffusées deux semaines avant la date de publication du bulletin.

La situation économique actuelle

Le rendement de l'économie au cours du mois, présenté en bref, comportant une analyse de l'emploi, de la production, de la demande et des principaux indicateurs précurseurs des tendances de l'activité économique.

Des notes techniques et statistiques

Des notes portant sur les nouveaux programmes statistiques ou les programmes révisés et sur les progrès en matière de méthodologie propres à Statistique Canada.

Les principaux événements économiques

Des événements internationaux et nationaux influençant l'économie canadienne, présentés en ordre chronologique.

Des études spéciales

Une recherche approfondie des affaires et des questions d'actualité liées à l'économie.

Un aperçu statistique

Des tableaux, des graphiques et des diagrammes englobant les statistiques des comptes nationaux, de la production, de la demande, du commerce, de l'emploi, des marchés financiers, etc.

ET PLUS ENCORE

Une analyse régionale

Des ventilations par province d'indicateurs économiques stratégiques.

Un survol de l'économie internationale

Un sommaire du rendement de l'économie des partenaires commerciaux du Canada, comme l'Europe, le Japon et les États-Unis.

Every week

The numbers that make decisions

The data that highlight national economic trends

Infomat is a digest of the most important statistics of the week. It is invaluable for business planners, policy makers and members of the media who take an interest in the Canadian economy.

Articles cite the most recent economic and social data available, describe current trends and point out significant changes. Regular features include a complete list of publications released by Statistics Canada during the reference week, a table of key economic indicators and a list of upcoming data releases. The text is concise, easy-to-read and complemented by tables and charts.

Infomat, Catalogue No. 11-002E (weekly), is available for $2.00 per copy/$100.00 annually (in Canada); $3.00 per copy/$150.00 annually (elsewhere).

Toutes les semaines

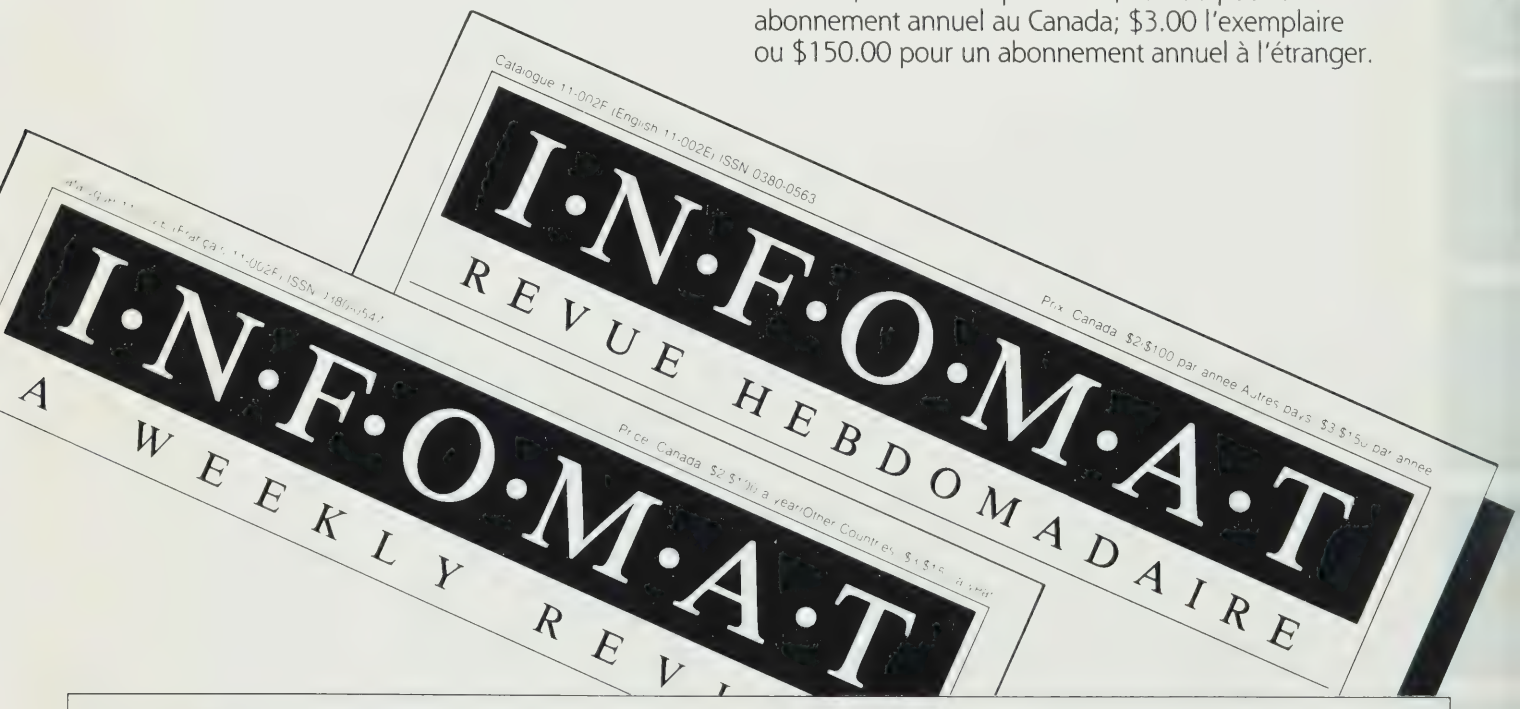

Les chiffres qui font les décisions

Les données illustrant les tendances de l'économie canadienne

Infomat est un résumé des statistiques les plus importantes de la semaine. C'est un outil d'une valeur inestimable pour les planificateurs du monde des affaires, les responsables de l'élaboration des politiques et les médias d'information s'intéressant à l'économie canadienne.

Les articles contenus dans ce bulletin citent les plus récentes données économiques et sociales disponibles, décrivent les tendances actuelles et soulignent les changements les plus significatifs. On y retrouve des chroniques régulières, notamment une liste complète des nouvelles publications parues à Statistique Canada au cours de la semaine de référence, un tableau des principaux indicateurs économiques, ainsi qu'une liste des données à paraître. Le texte est concis, facile à lire et illustré de tableaux et de graphiques.

Infomat, n° 11-002F au catalogue (hebdomadaire), se vend $2.00 l'exemplaire ou $100.00 pour un abonnement annuel au Canada; $3.00 l'exemplaire ou $150.00 pour un abonnement annuel à l'étranger.

To order, complete the order form included or write to Publication Sales, Statistics Canada, Ottawa, Ontario, K1A 0T6. For faster service, using Visa or MasterCard, call toll-free.

Please make cheques or money orders payable to the Receiver General for Canada/Publications.
